USING THIS DOCUMENT

This document is intended for the hardware and software engineer’s general information on the Realtek RTL8367RB-VB IC.

Though every effort has been made to ensure that this document is current and accurate, more information may have become available subsequent to the production of this guide.

REVISION HISTORY

| Revision | Release Date | Summary |
|----------|--------------|--|
| Pre-0.9 | 2013/11/18 | Preliminary Release. |
| Pre-0.91 | 2014/05/15 | Revised Section 12.4 DC Characteristics and Section 12.5 AC Characteristics. |
| Pre-0.92 | 2014/06/19 | Revised Section 12.4 DC Characteristics. |

Table of Contents

| | |
|--|-----------|
| 1. GENERAL DESCRIPTION | 1 |
| 2. FEATURES | 3 |
| 3. SYSTEM APPLICATIONS | 5 |
| 4. APPLICATION EXAMPLES | 5 |
| 4.1. 5-PORT 1000BASE-T SWITCH | 5 |
| 4.2. 5-PORT 1000BASE-T ROUTER WITH DUAL MII/RGMII | 6 |
| 5. BLOCK DIAGRAM | 7 |
| 6. PIN ASSIGNMENTS | 8 |
| 6.1. PACKAGE IDENTIFICATION | 8 |
| 6.2. PIN ASSIGNMENTS TABLE | 9 |
| 7. PIN DESCRIPTIONS | 12 |
| 7.1. MEDIA DEPENDENT INTERFACE PINS | 12 |
| 7.2. GENERAL PURPOSE INTERFACES | 13 |
| 7.2.1. RGMII Pins | 15 |
| 7.2.2. MII Pins | 17 |
| 7.3. LED PINS | 20 |
| 7.4. CONFIGURATION STRAPPING PINS | 21 |
| 7.4.1. Configuration Strapping Pins (<i>DISAUTOLOAD</i> and <i>DIS_8051</i>) | 23 |
| 7.5. MANAGEMENT INTERFACE PINS | 23 |
| 7.6. MISCELLANEOUS PINS | 24 |
| 7.7. TEST PINS | 27 |
| 7.8. POWER AND GND PINS | 27 |
| 8. PHYSICAL LAYER FUNCTIONAL OVERVIEW | 28 |
| 8.1. MDI INTERFACE | 28 |
| 8.2. 1000BASE-T TRANSMIT FUNCTION | 28 |
| 8.3. 1000BASE-T RECEIVE FUNCTION | 28 |
| 8.4. 100BASE-TX TRANSMIT FUNCTION | 28 |
| 8.5. 100BASE-TX RECEIVE FUNCTION | 29 |
| 8.6. 10BASE-T TRANSMIT FUNCTION | 29 |
| 8.7. 10BASE-T RECEIVE FUNCTION | 29 |
| 8.8. AUTO-NEGOTIATION FOR UTP | 29 |
| 8.9. CROSSOVER DETECTION AND AUTO CORRECTION | 30 |
| 8.10. POLARITY CORRECTION | 30 |
| 9. GENERAL FUNCTION DESCRIPTION | 31 |
| 9.1. RESET | 31 |
| 9.1.1. Hardware Reset | 31 |
| 9.1.2. Software Reset | 31 |
| 9.2. IEEE 802.3X FULL DUPLEX FLOW CONTROL | 31 |
| 9.3. HALF DUPLEX FLOW CONTROL | 32 |
| 9.3.1. Back-Pressure Mode | 32 |
| 9.4. SEARCH AND LEARNING | 33 |
| 9.5. SVL AND IVL/SVL | 33 |
| 9.6. ILLEGAL FRAME FILTERING | 33 |
| 9.7. IEEE 802.3 RESERVED GROUP ADDRESSES FILTERING CONTROL | 34 |
| 9.8. BROADCAST/MULTICAST/UNKNOWN DA STORM CONTROL | 35 |

| | | |
|------------|--|-----------|
| 9.9. | PORT SECURITY FUNCTION | 35 |
| 9.10. | MIB COUNTERS | 35 |
| 9.11. | PORT MIRRORING | 35 |

1. General Description

The RTL8367RB-VB-CG is a LQFP128 EPAD, high-performance 5+2-port 10/100/1000M Ethernet switch featuring a low-power integrated 5-port Giga-PHY that supports 1000Base-T, 100Base-TX, and 10Base-T.

For specific applications, the RTL8367RB-VB supports two extra interfaces that could be configured as RGMII/MII interfaces. The RTL8367RB-VB integrates all the functions of a high-speed switch system; including SRAM for packet buffering, non-blocking switch fabric, and internal register management into a single CMOS device. Only a 25MHz crystal is required; an optional EEPROM is offered for internal register configuration.

The embedded packet storage SRAM in the RTL8367RB-VB features superior memory management technology to efficiently utilize memory space. The RTL8367RB-VB integrates a 2K-entry look-up table with a 4-way XOR Hashing algorithm for address searching and learning. The table provides read/write access from the EEPROM Serial Management Interface (SMI), Media Independent Interface Management (MIIM), or SPI Interface. Each of the table entries can be configured as a static entry. The entry aging time is between 200 and 400 seconds. Eight Filtering Databases are used to provide Independent VLAN Learning and Shared VLAN Learning (IVL/SVL) functions.

The Extension GMAC1 and Extension GMAC2 of the RTL8367RB-VB implement dual RGMII/MII interfaces. These interfaces could be connected to an external PHY, MAC, CPU, or RISC for specific applications. In router applications, the RTL8367RB-VB supports Port VID (PVID) for each port to insert a PVID in the VLAN tag on egress. When using this function, VID information carried in the VLAN tag will be changed to PVID.

Note: The RTL8367RB-VB Extra Interface (Extension GMAC1 and Extension GMAC2) supports:

Dual-Port Reduced Gigabit Media Independent Interface (RGMII)

Dual-Port Media Independent Interface (MII)

The RTL8367RB-VB supports standard 802.3x flow control frames for full duplex, and optional backpressure for half duplex. It determines when to invoke the flow control mechanism by checking the availability of system resources, including the packet buffers and transmitting queues. The RTL8367RB-VB supports broadcast/multicast output dropping, and will forward broadcast/multicast packets to non-blocked ports only. For IP multicast applications, the RTL8367RB-VB supports IPv4 IGMPv1/v2/v3 and IPv6 MLDv1/v2 snooping.

In order to support flexible traffic classification, the RTL8367RB-VB supports 96-entry ACL rule check and multiple actions options. Each port can optionally enable or disable the ACL rule check function. The ACL rule key can be based on packet physical port, Layer2, Layer3, and Layer4 information. When an ACL rule matches, the action taken is configurable to Drop/Permit/Redirect/Mirror, change priority value in 802.1q/Q tag, force output tag format and rate policing. The rate policing mechanism supports from 8Kbps to 1Gbps (in 8Kbps steps).

In Bridge operation the RTL8367RB-VB supports 16 sets of port configurations: disable, block, learning, and forwarding for Spanning Tree Protocol and Multiple Spanning Tree Protocol. To meet security and management application requirements, the RTL8367RB-VB supports IEEE 802.1x Port-based/MAC-based Access Control. For those ports that do not pass IEEE 802.1x authentication, the RTL8367RB-VB provides a Port-based/MAC-based Guest VLAN function for them to access limited network resources.

A 1-set Port Mirroring function is configured to mirror traffic (RX, TX, or both) appearing on one of the switch's ports. Support is provided on each port for multiple RFC MIB Counters, for easy debug and diagnostics.

To improve real-time or multimedia networking applications, the RTL8367RB-VB supports eight priority assignments for each received packet. These are based on (1) Port-based priority; (2) 802.1p/Q VLAN tag priority; (3) DSCP field in IPv4/IPv6 header; and (4) ACL-assigned priority. Each output port supports a weighted ratio of eight priority queues to fit bandwidth requirements in different applications. The input bandwidth control function helps limit per-port traffic utilization. There is one leaky bucket for average packet rate control for each queue of all ports. Queue scheduling algorithm can use Strict Priority (SP) or Weighted Fair Queue (WFQ) or mixed.

The RTL8367RB-VB provides a 4K-entry VLAN table for 802.1Q port-based, tag-based, and protocol-based VLAN operation to separate logical connectivity from physical connectivity. The RTL8367RB-VB supports four Protocol-based VLAN configurations that can optionally select EtherType, LLC, and RFC1042 as the search key. Each port may be set to any topology via EEPROM upon reset, or EEPROM SMI Slave after reset.

In router applications, the router may want to know the input port of the incoming packet. The RTL8367RB-VB supports an option to insert a VLAN tag with VID=Port VID (PVID) on each egress port. The RTL8367RB-VB also provides an option to admit VLAN tagged packet with a specific PVID only. If this function is enabled, the RTL8367RB-VB will drop all non-tagged packets and packets with an incorrect PVID.

2. Features

- Single-chip 5+2-port 10/100/1000M non-blocking switch architecture
- Embedded 5-port 10/100/1000Base-T PHY
- Each port supports full duplex 10/100/1000M connectivity (half duplex only supported in 10/100M mode)
- Extra Interface (Extension GMAC1 and Extension GMAC2) supports
 - ◆ Dual-port Media Independent Interface (MII)
 - ◆ Dual-port Reduced 10/100/1000M Media Independent Interface (RGMII)
- Full-duplex and half-duplex operation with IEEE 802.3x flow control and backpressure
- Supports 9216-byte jumbo packet length forwarding at wire speed
- Realtek Cable Test (RTCT) function
- Supports 96-entry ACL Rules
 - ◆ Search keys support physical port, Layer2, Layer3, and Layer4 information
 - ◆ Actions include mirror, redirect, dropping, priority adjustment, traffic policing, CVLAN decision, and SVLAN assignment GPIO control, force output tag format, interrupt and logging counter
 - ◆ Supports five types of user defined ACL rule format for 96 ACL rules
 - ◆ Optional per-port enable/disable of ACL function
 - ◆ Optional setting of per-port action to take when ACL mismatch
- Supports IEEE 802.1Q VLAN
 - ◆ Supports 4K VLANs and 32 Extra Enhanced VLANs
- Supports Un-tag definition in each VLAN
- Supports VLAN policing and VLAN forwarding decision
- Port-based, Tag-based, and Protocol-based VLAN
- Up to 4 Protocol-based VLAN entries
- Per-port and per-VLAN egress VLAN tagging and un-tagging
- Supports IVL, SVL, and IVL/SVL
 - ◆ 2K-entry MAC address table with 4-way hash algorithm
 - ◆ Up to 2K-entry L2/L3 Filtering Database
 - ◆ Per-port MAC learning limitation
 - ◆ System base MAC learning limitation
- Supports Spanning Tree Port Behavior configuration
 - ◆ IEEE 802.1w Rapid Spanning Tree
 - ◆ IEEE 802.1s Multiple Spanning Tree with up to 16 Spanning Tree instances
- Supports IEEE 802.1x Access Control Protocol
 - ◆ Port-Based Access Control
 - ◆ MAC-Based Access Control
 - ◆ Guest VLAN
- Supports Auto protection from Denial-of-Service attacks
- Supports H/W IGMP/MLD Snooping
 - ◆ IGMPv1/v2/v3 and MLD v1/v2
 - ◆ Supports Fast Leave
 - ◆ Static router port configuration
 - ◆ Dynamic router port learning and aging
- Supports Quality of Service (QoS)

- ◆ Supports per port Input Bandwidth Control
- ◆ Traffic classification based on IEEE 802.1p/Q priority definition, physical Port, IP DSCP field, ACL definition, VLAN based priority, MAC based priority and SVLAN based priority
- ◆ Eight Priority Queues per port
- ◆ Per queue flow control
- ◆ Min-Max Scheduling
- ◆ Strict Priority and Weighted Fair Queue (WFQ) to provide minimum bandwidth
- ◆ One leaky bucket to constrain the average packet rate of each queue
- Supports rate limiting (32 shared meters, with 8kbps granulation or packets per second configuration)
- Supports RFC MIB Counter
 - ◆ MIB-II (RFC 1213)
 - ◆ Ethernet-Like MIB (RFC 3635)
 - ◆ Interface Group MIB (RFC 2863)
 - ◆ RMON (RFC 2819)
 - ◆ Bridge MIB (RFC 1493)
 - ◆ Bridge MIB Extension (RFC 2674)
- Supports Stacking VLAN and Port Isolation with eight Enhanced Filtering Databases
- Supports IEEE 802.1ad Stacking VLAN
 - ◆ Supports 64 SVLANS
 - ◆ Supports 32 L2/IPv4 Multicast mappings to SVLAN
 - ◆ Supports MAC-based 1:N VLAN
- Supports two IEEE 802.3ad Link aggregation port groups
- Supports Port Mirror function for one monitor port for multiple mirroring ports
- Supports OAM and EEE LLDP (Energy Efficient Ethernet Link Layer Discovery Protocol)
- Supports Loop Detection
- Security Filtering
 - ◆ Disable learning for each port
 - ◆ Disable learning-table aging for each port
 - ◆ Drop unknown DA for each port
- Broadcast/Multicast/Unknown DA storm control protects system from attack by hackers
- Supports IEEE 802.3az Energy Efficient Ethernet (EEE)
- Supports Realtek Green Ethernet features
 - ◆ Link-On Cable Length Power Saving
 - ◆ Link-Down Power Saving
- Supports one interrupt output to external CPU for notification
- Each port supports 3 LED outputs
- Management Interface Supports
 - ◆ EEPROM SMI Slave interface
 - ◆ Media Independent Interface Management (MIIM)
 - ◆ SPI Slave Interface
- Supports 32K-byte EEPROM space for configuration
- Integrated 8051 microprocessor.
- 25MHz crystal or 3.3V OSC input
- 14x14 LQFP 128-pin E-PAD package

3. System Applications

- 5-Port 1000Base-T Switch
- 5-Port 1000Base-T Router with Dual MII/RGMII

4. Application Examples

4.1. 5-Port 1000Base-T Switch

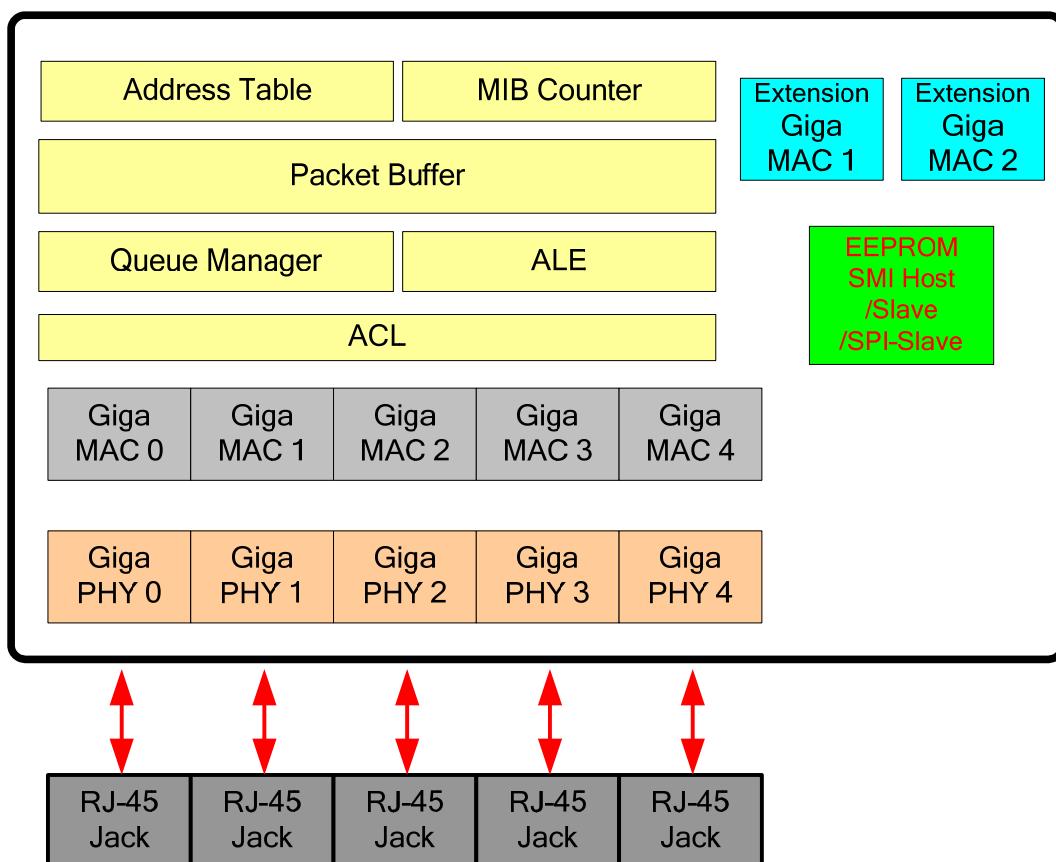

Figure 1. 5-Port 1000Base-T Switch

4.2. 5-Port 1000Base-T Router with Dual MII/RGMII

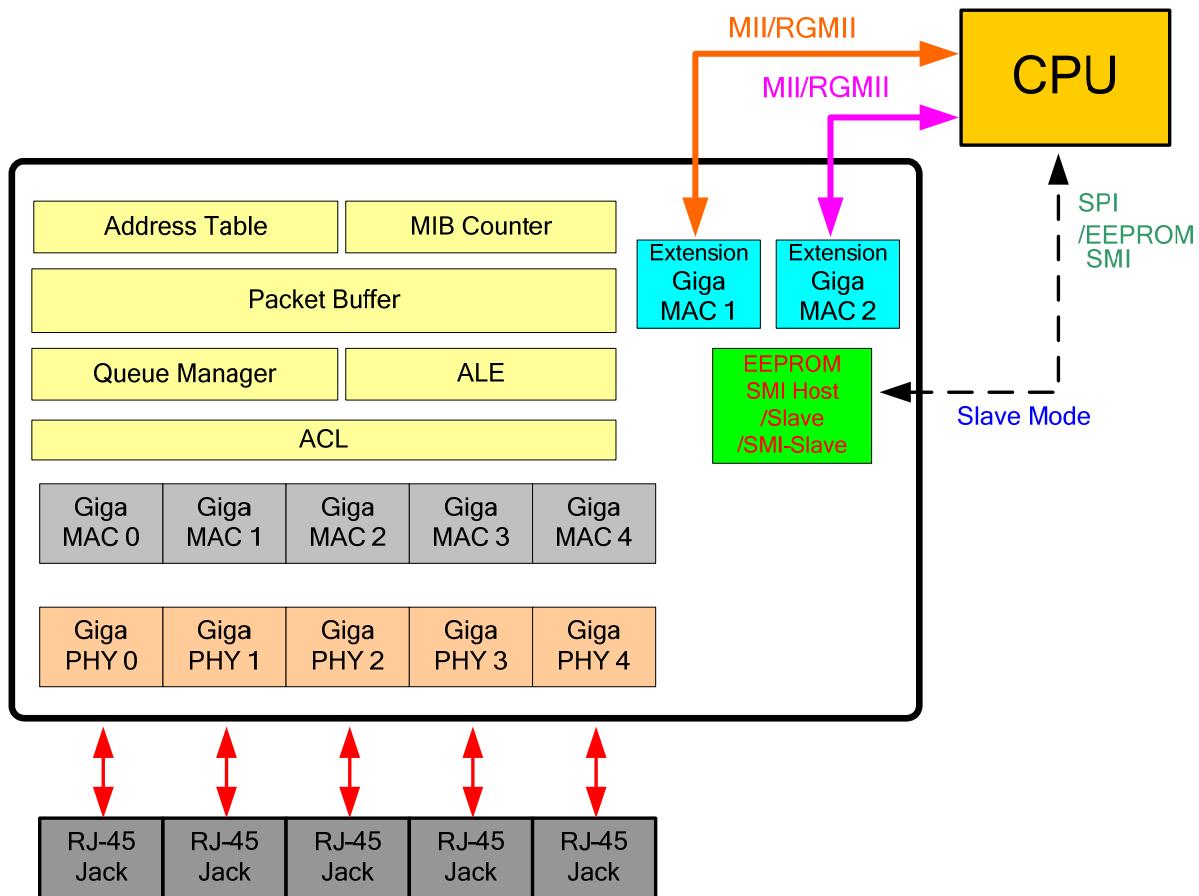

Figure 2. 5-Port 1000Base-T Router with Dual MII/RGMII

Note: Extra Interface (Extension GMAC1 and Extension GMAC2) in MII/RGMII Mode.

5. Block Diagram

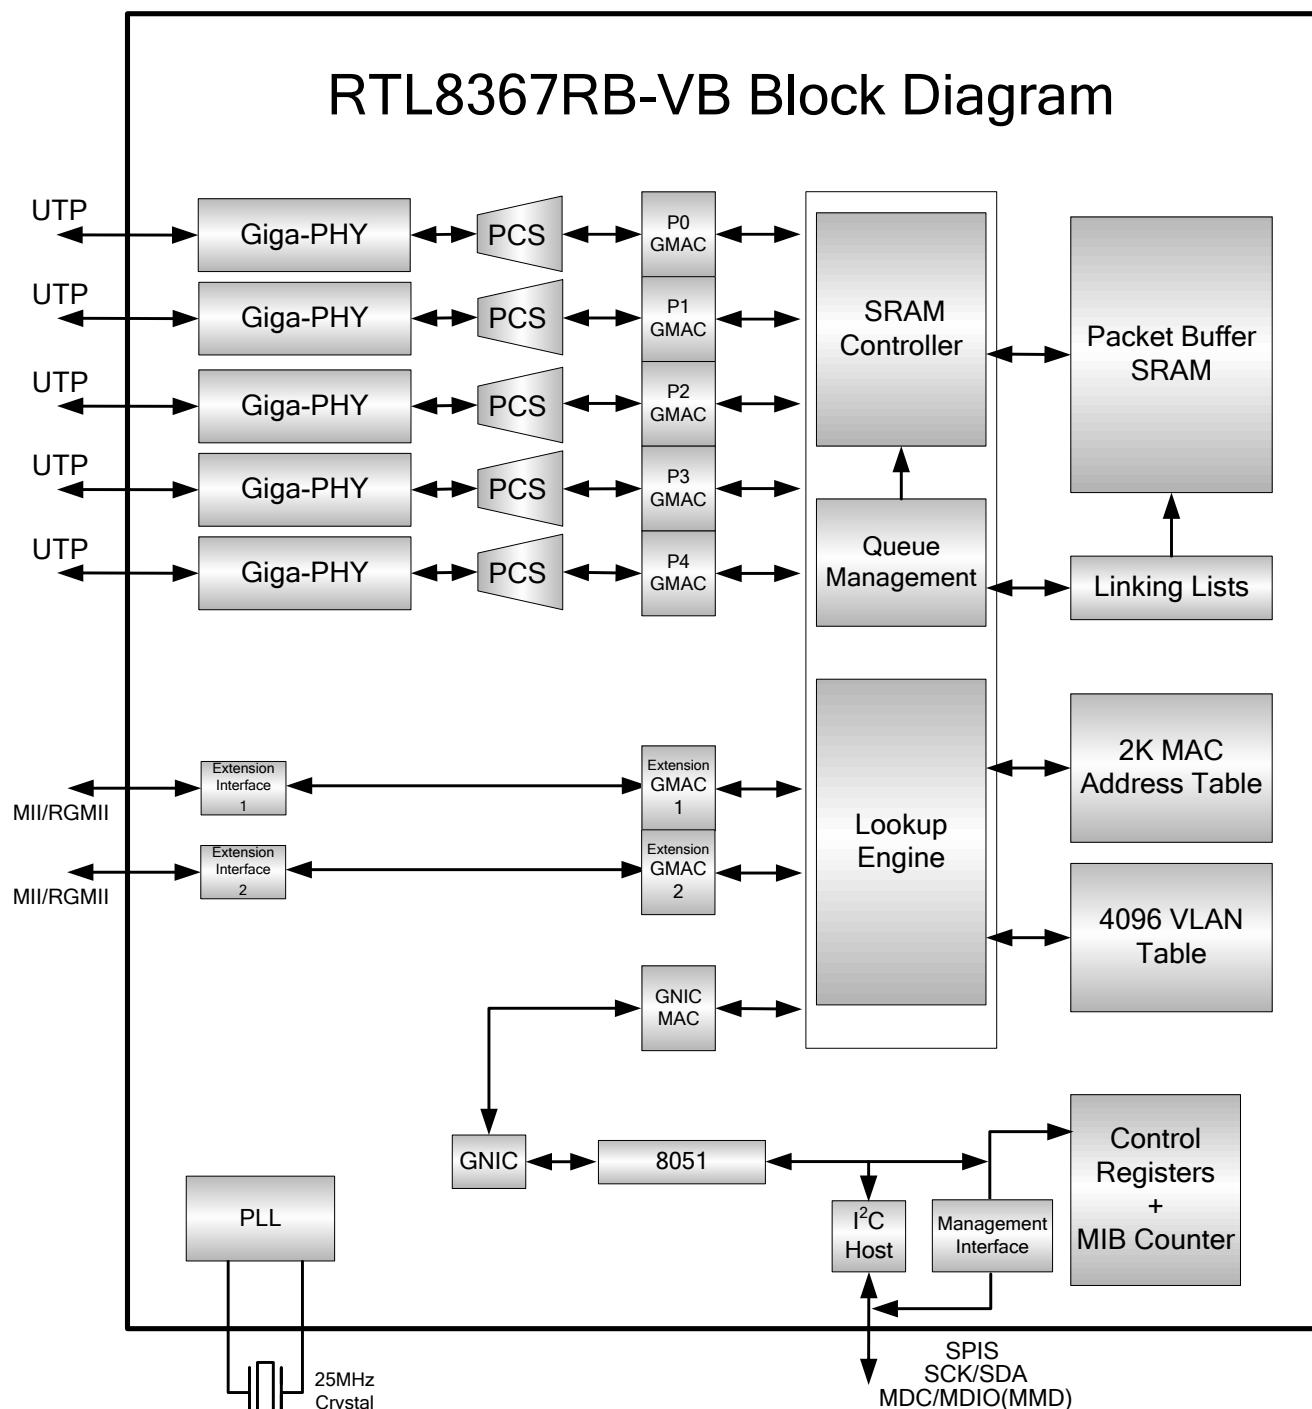

Figure 3. Block Diagram

6. Pin Assignments

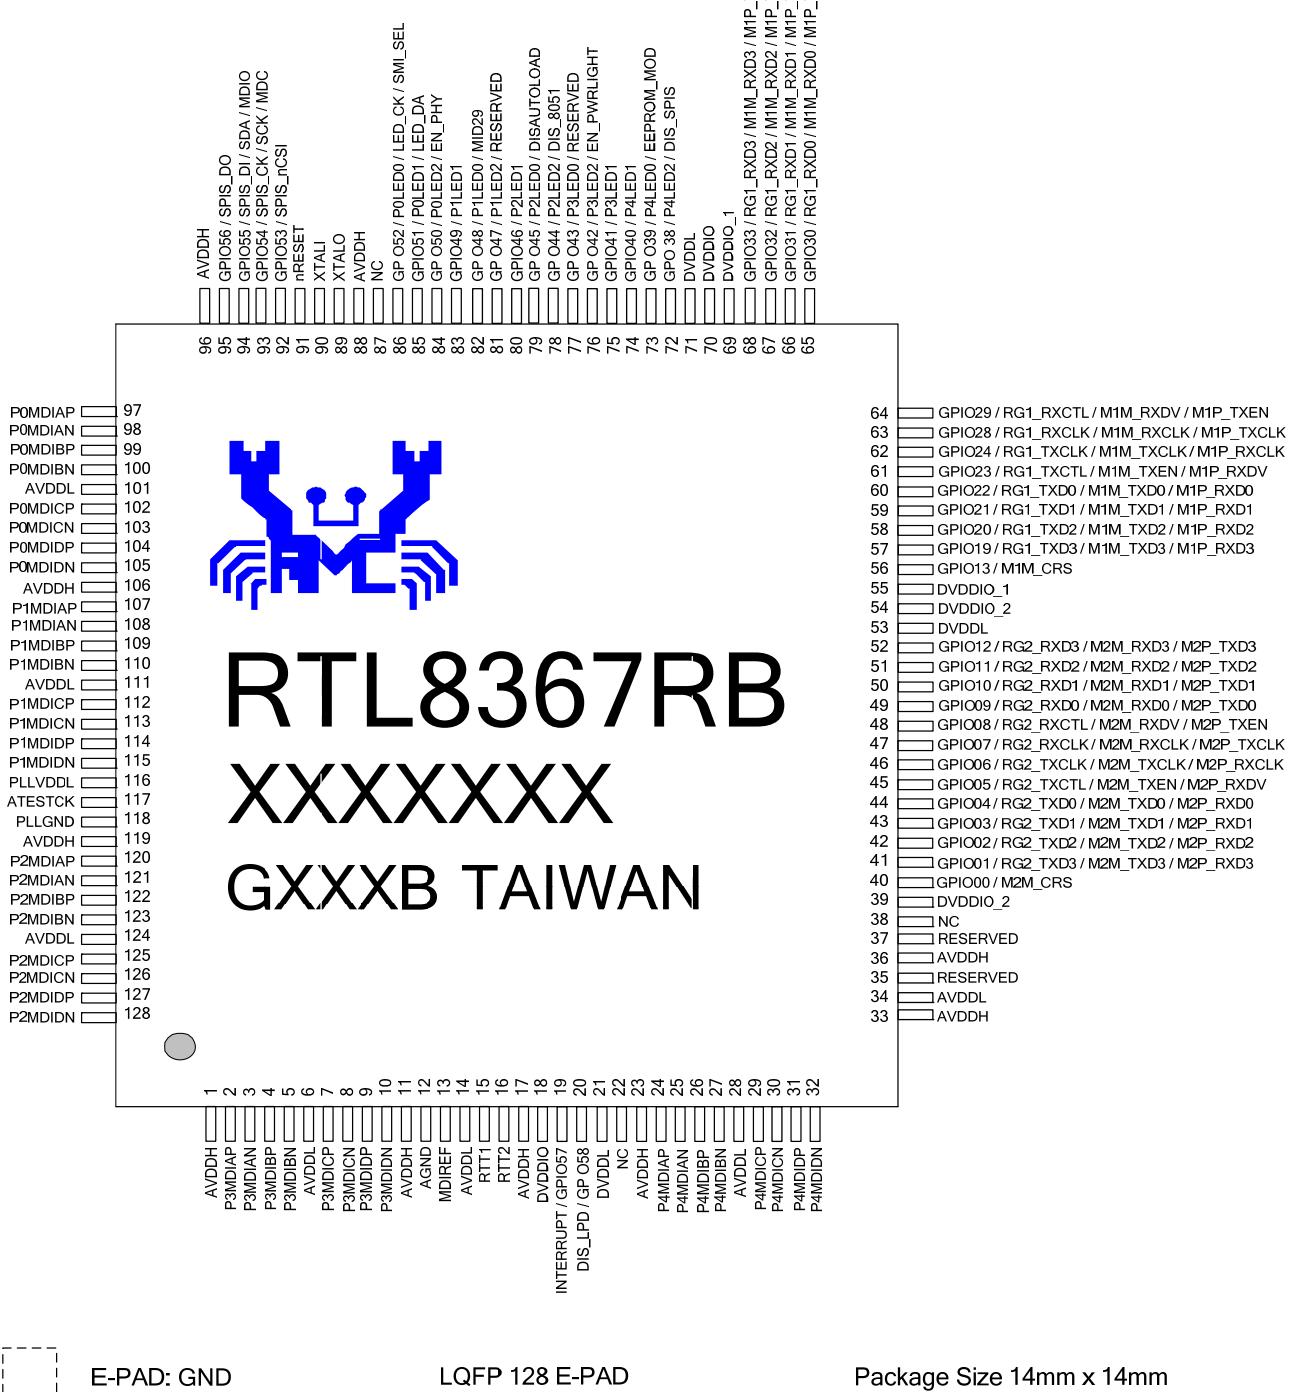

Figure 4. Pin Assignments (LQFP-128 EPAD)

6.1. Package Identification

Green package is indicated by the ‘G’ in GXXXB (Figure 4). The version is indicated by the ‘B’.

6.2. Pin Assignments Table

Upon Reset: Defined as a short time after the end of a hardware reset.

After Reset: Defined as the time after the specified 'Upon Reset' time.

7. Pin Descriptions

7.1. Media Dependent Interface Pins

Table 2. Media Dependent Interface Pins

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|-----------|---------|------|------------|---|
| P0MDIAP/N | 97 | AI/O | 10 | Port 0 Media Dependent Interface A~D. For 1000Base-T operation, differential data from the media is transmitted and received on all four pairs. For 100Base-TX and 10Base-T operation, only MDIAP/N and MDIBP/N are used. Auto MDIX can reverse the pairs MDIAP/N and MDIBP/N. |
| P0MDIBP/N | 98 | | | |
| P0MDICP/N | 99 | | | |
| P0MDIDP/N | 100 | | | |
| | 102 | | | |
| | 103 | | | |
| | 104 | | | Each of the differential pairs has an internal 100-ohm termination resistor. |
| | 105 | | | |
| P1MDIAP/N | 107 | AI/O | 10 | Port 1 Media Dependent Interface A~D. For 1000Base-T operation, differential data from the media is transmitted and received on all four pairs. For 100Base-TX and 10Base-T operation, only MDIAP/N and MDIBP/N are used. Auto MDIX can reverse the pairs MDIAP/N and MDIBP/N. |
| P1MDIBP/N | 108 | | | |
| P1MDICP/N | 109 | | | |
| P1MDIDP/N | 110 | | | |
| | 112 | | | |
| | 113 | | | |
| | 114 | | | Each of the differential pairs has an internal 100-ohm termination resistor. |
| | 115 | | | |
| P2MDIAP/N | 120 | AI/O | 10 | Port 2 Media Dependent Interface A~D. For 1000Base-T operation, differential data from the media is transmitted and received on all four pairs. For 100Base-TX and 10Base-T operation, only MDIAP/N and MDIBP/N are used. Auto MDIX can reverse the pairs MDIAP/N and MDIBP/N. |
| P2MDIBP/N | 121 | | | |
| P2MDICP/N | 122 | | | |
| P2MDIDP/N | 123 | | | |
| | 125 | | | |
| | 126 | | | |
| | 127 | | | Each of the differential pairs has an internal 100-ohm termination resistor. |
| | 128 | | | |
| P3MDIAP/N | 2 | AI/O | 10 | Port 3 Media Dependent Interface A~D. For 1000Base-T operation, differential data from the media is transmitted and received on all four pairs. For 100Base-TX and 10Base-T operation, only MDIAP/N and MDIBP/N are used. Auto MDIX can reverse the pairs MDIAP/N and MDIBP/N. |
| P3MDIBP/N | 3 | | | |
| P3MDICP/N | 4 | | | |
| P3MDIDP/N | 5 | | | |
| | 7 | | | |
| | 8 | | | |
| | 9 | | | Each of the differential pairs has an internal 100-ohm termination resistor. |
| | 10 | | | |
| P4MDIAP/N | 24 | AI/O | 10 | Port 4 Media Dependent Interface A~D. For 1000Base-T operation, differential data from the media is transmitted and received on all four pairs. For 100Base-TX and 10Base-T operation, only MDIAP/N and MDIBP/N are used. Auto MDIX can reverse the pairs MDIAP/N and MDIBP/N. |
| P4MDIBP/N | 25 | | | |
| P4MDICP/N | 26 | | | |
| P4MDIDP/N | 27 | | | |
| | 29 | | | |
| | 30 | | | |
| | 31 | | | Each of the differential pairs has an internal 100-ohm termination resistor. |
| | 32 | | | |

7.2. General Purpose Interfaces

The RTL8367RB-VB supports multi-function General Purpose Interfaces that can be configured as MII/RGMII mode for extension GMAC interfaces. The RTL8367RB-VB supports two extension interfaces (Extension GMAC1 and Extension GMAC2) for connecting with an external PHY, MAC, or CPU in specific applications. These extension interfaces support RGMII, MII MAC mode, or MII PHY mode via register configuration.

Table 3. General Purpose Interfaces Pins

| Pin No. | GPIO | RGMII | MII MAC Mode | MII PHY Mode | Other function | Configuration Strapping |
|---------|--------|-----------|--------------|--------------|----------------|----------------------------|
| 19 | GPIO57 | - | - | - | INTERRUPT | - |
| 20 | GP O58 | - | - | - | - | DIS_LPD |

7.2.1. RGMII Pins

The Extension GMAC1 and Extension GMAC2 of the RTL8367RB-VB support dual RGMII interfaces to connect with an external MAC or PHY device when register configuration is set to RGMII mode interface.

Table 4. Extension GMAC1 RGMII Pins

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|-----------|---------|------|------------|--|
| RG1_TXD3 | 57 | O | - | RG1_TXD[3:0] Extension GMAC1 RGMII Transmit Data Output. Transmitted data is sent synchronously to RG1_TXCLK. |
| RG1_TXD2 | 58 | | | |
| RG1_TXD1 | 59 | | | |
| RG1_TXD0 | 60 | | | |
| RG1_TXCTL | 61 | O | - | RG1_TXCTL Extension GMAC1 RGMII Transmit Control signal Output. The RG1_TXCTL indicates TX_EN at the rising edge of RG1_TXCLK, and TX_ER at the falling edge of RG1_TXCLK. At the RG1_TXCLK falling edge, RG1_TXCTL= TX_EN (XOR) TX_ER. |
| RG1_TXCLK | 62 | O | - | RG1_TXCLK Extension GMAC1 RGMII Transmit Clock Output. RG1_TXCLK is 125MHz @ 1Gbps, 25MHz @ 100Mbps, and 2.5MHz @ 10Mbps. Used for RG1_TXD[3:0] and RG1_TXCTL synchronization at RG1_TXCLK on both rising and falling edges. |
| RG1_RXCLK | 63 | I | - | RG1_RXCLK Extension GMAC1 RGMII Receive Clock Input. RG1_RXCLK is 125MHz @ 1Gbps, 25MHz @ 100Mbps, and 2.5MHz @ 10Mbps. Used for RG1_RXD[3:0] and RG1_RXCTL synchronization at both RG1_RXCLK rising and falling edges. This pin must be pulled low with a 1K ohm resistor when not used. |
| RG1_RXCTL | 64 | I | - | RG1_RXCTL Extension GMAC1 RGMII Receive Control signal input. The RG1_RXCTL indicates RX_DV at the rising of RG1_RXCLK and RX_ER at the falling edge of RG1_RXCLK. At RG1_RXCLK falling edge, RG1_RXCTL= RX_DV (XOR) RX_ER. This pin must be pulled low with a 1K ohm resistor when not used. |
| RG1_RXD0 | 65 | I | - | RG1_RXD[3:0] Extension GMAC1 RGMII Receive Data Input. Received data is received synchronously by RG1_RXCLK. These pins must be pulled low with a 1K ohm resistor when not used. |
| RG1_RXD1 | 66 | | | |
| RG1_RXD2 | 67 | | | |
| RG1_RXD3 | 68 | | | |

Table 5. Extension GMAC2 RGMII Pins

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|-----------|---------|------|------------|--|
| RG2_TXD3 | 41 | O | - | RG2_TXD[3:0] Extension GMAC2 RGMII Transmit Data Output. Transmitted data is sent synchronously to RG2_TXCLK. |
| RG2_TXD2 | 42 | O | - | |
| RG2_TXD1 | 43 | O | - | |
| RG2_TXD0 | 44 | O | - | |
| RG2_TXCTL | 45 | O | - | RG2_TXCTL Extension GMAC2 RGMII Transmit Control signal Output. The RG2_TXCTL indicates TX_EN at the rising edge of RG2_TXCLK, and TX_ER at the falling edge of RG2_TXCLK. At the RG2_TXCLK falling edge, RG2_RXCTL= TX_EN (XOR) TX_ER. |
| RG2_TXCLK | 46 | O | - | RG2_TXCLK Extension GMAC2 RGMII Transmit Clock Output. RG2_TXCLK is 125MHz @ 1Gbps, 25MHz @ 100Mbps, and 2.5MHz @ 10Mbps. Used for RG2_TXD[3:0] and RG2_RXCTL synchronization at RG2_TXCLK on both rising and falling edges. |
| RG2_RXCLK | 47 | I | - | RG2_RXCLK Extension GMAC2 RGMII Receive Clock Input. RG2_RXCLK is 125MHz @ 1Gbps, 25MHz @ 100Mbps, and 2.5MHz @ 10Mbps. Used for RG2_RXD[3:0] and RG2_RXCTL synchronization at both RG2_RXCLK rising and falling edges. This pin must be pulled low with a 1K ohm resistor when not used. |
| RG2_RXCTL | 48 | I | - | RG2_RXCTL Extension GMAC2 RGMII Receive Control signal input. The RG2_RXCTL indicates RX_DV at the rising of RG2_RXCLK and RX_ER at the falling edge of RG2_RXCLK. At RG2_RXCLK falling edge, RG2_RXCTL= RX_DV (XOR) RX_ER. This pin must be pulled low with a 1K ohm resistor when not used. |
| RG2_RXD0 | 49 | I | - | RG2_RXD[3:0] Extension GMAC2 RGMII Receive Data Input. Received data is received synchronously by RG2_RXCLK. These pins must be pulled low with a 1K ohm resistor when not used. |
| RG2_RXD1 | 50 | I | - | |
| RG2_RXD2 | 51 | I | - | |
| RG2_RXD3 | 52 | I | - | |

7.2.2. MII Pins

The Extension GMAC1 and Extension GMAC2 of the RTL8367RB-VB support dual MII interfaces to connect with an external MAC or PHY device when register configuration is set to MII mode interface. These two MII interfaces can be configured as MII MAC mode or MII PHY mode by register.

Table 6. Extension GMAC1 MII Pins (MII MAC Mode or MII PHY Mode)

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|-------------------------|---------|-----------------|------------|---|
| M1M_CRS | 56 | I _{PD} | - | M1M_CRS Extension GMAC1 MII MAC Mode Carrier Sense Input when operating in 10/100Mbps MII half duplex mode. This pin must be pulled low with a 1K ohm resistor when not used. |
| M1M_TXD3/ M1P_RXD3 | 57 | O | - | M1M_TXD[3:0] Extension GMAC1 MII MAC Mode Transmit Data Output. |
| M1M_TXD2/ M1P_RXD2 | 58 | | | Transmitted data is sent synchronously at the rising edge of M1M_TXCLK. |
| M1M_TXD1/ M1P_RXD1 | 59 | | | M1P_RXD[3:0] Extension GMAC1 MII PHY Mode Receive Data Output. |
| M1M_TXD0/ M1P_RXD0 | 60 | | | Received data is received synchronously at the rising edge of M1P_RXCLK. |
| M1M_TXEN/ M1P_RXDV | 61 | O | - | M1M_TXEN Extension GMAC1 MII MAC Mode Transmit Data Enable Output. Transmit enable that is sent synchronously at the rising edge of M1M_TXCLK. M1P_RXDV Extension GMAC1 MII PHY Mode Receive Data Valid Output. Receive Data Valid signal that is sent synchronously at the rising edge of M1P_RXCLK. |
| M1M_TXCLK/ M1P_RXCLK | 62 | I/O | - | M1M_TXCLK Extension GMAC1 MII MAC Mode Transmit Clock Input. In MII 100Mbps, M1M_TXCLK is 25MHz Clock Input. In MII 10Mbps, M1M_TXCLK is 2.5MHz Clock Input. Used to synchronize M1M_TXD[3:0] and M1M_TXEN. M1P_RXCLK Extension GMAC1 MII PHY Mode Receive Clock Output. In MII 100Mbps, M1P_RXCLK is 25MHz Clock Output. In MII 10Mbps, M1P_RXCLK is 2.5MHz Clock Output. Used to synchronize M1P_RXD[3:0] and M1P_RXDV. This pin must be pulled low with a 1K ohm resistor when not used. |
| M1M_RXCLK/ M1P_TXCLK | 63 | I/O | - | M1M_RXCLK Extension GMAC1 MII MAC Mode Receive Clock Input. In MII 100Mbps, M1M_RXCLK is 25MHz Clock Input. In MII 10Mbps, M1M_RXCLK is 2.5MHz Clock Input. Used to synchronize M1M_RXD[3:0], M1M_RXDV, and M1P_CRS. M1P_TXCLK Extension GMAC1 MII PHY Mode Transmit Clock Output. In MII 100Mbps, M1P_TXCLK is 25MHz Clock Output. In MII 10Mbps, M1P_TXCLK is 2.5MHz Clock Output. Used to synchronize M1P_RXD[3:0] and M1P_RXEN. This pin must be pulled low with a 1K ohm resistor when not used. |

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|-----------------------|---------|------|------------|--|
| M1M_RXDV/ M1P_TXEN | 64 | I | - | M1M_RXDV Extension GMAC1 MII MAC Mode Receive Data Valid Input. Receive Data Valid sent synchronously at the rising edge of M1M_RXCLK. M1P_TXEN Extension GMAC1 MII PHY Mode Transmit Data Enable Input. Transmit Data Enable is received synchronously at the rising edge of M1P_TXCLK. This pin must be pulled low with a 1K ohm resistor when not used. |
| M1M_RXD0/ M1P_TXD0 | 65 | I | - | M1M_RXD[3:0] Extension GMAC1 MII MAC Mode Receive Data Input. |
| M1M_RXD1/ M1P_TXD1 | 66 | | | Received data that is received synchronously at the rising edge of M1M_RXCLK. |
| M1M_RXD2/ M1P_TXD2 | 67 | | | M1P_TXD[3:0] Extension GMAC1 MII PHY Mode Transmit Data Input. Transmitted data is received synchronously at the rising edge of M1P_TXCLK. |
| M1M_RXD3/ M1P_TXD3 | 68 | | | These pins must be pulled low with a 1K ohm resistor when not used. |

Table 7. Extension GMAC2 MII Pins (MII MAC Mode or MII PHY Mode)

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|-----------------------|---------|-----------------|------------|--|
| M2M_CRS | 40 | I _{PD} | - | M2M_CRS Extension GMAC2 MII MAC Mode Carrier Sense Input when operating in 10/100Mbps MII half duplex mode. This pin must be pulled low with a 1K ohm resistor. |
| M2M_TXD3/ M2P_RXD3 | 41 | O | - | M2M_TXD[3:0] Extension GMAC2 MII MAC Mode Transmit Data Output. |
| M2M_TXD2/ M2P_RXD2 | 42 | | | Transmitted data is sent synchronously at the rising edge of M2M_TXCLK. |
| M2M_TXD1/ M2P_RXD1 | 43 | | | M2P_RXD[3:0] Extension GMAC2 MII PHY Mode Receive Data Output. |
| M2M_TXD0/ M2P_RXD0 | 44 | | | Received data is received synchronously at the rising edge of M2P_RXCLK. |
| M2M_TXEN/ M2P_RXDV | 45 | O | - | M2M_TXEN Extension GMAC2 MII MAC Mode Transmit Data Enable Output. Transmit enable that is sent synchronously at the rising edge of M2M_TXCLK. M2P_RXDV Extension GMAC2 MII PHY Mode Receive Data Valid Output. Receive Data Valid signal that is sent synchronously at the rising edge of M2P_RXCLK. |

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|--|----------------------|------|------------|--|
| M2M_TXCLK/ M2P_RXCLK | 46 | I/O | - | <p>M2M_TXCLK Extension GMAC2 MII MAC Mode Transmit Clock Input. In MII 100Mbps, M2M_TXCLK is 25MHz Clock Input. In MII 10Mbps, M2M_TXCLK is 2.5MHz Clock Input. Used to synchronize M2M_TXD[3:0] and M2M_TXEN. M2P_RXCLK Extension GMAC2 MII PHY Mode Receive Clock Output. In MII 100Mbps, M2P_RXCLK is 25MHz Clock Output. In MII 10Mbps, M2P_RXCLK is 2.5MHz Clock Output. Used to synchronize M2P_RXD[3:0] and M2P_RXDV. This pin must be pulled low with a 1K ohm resistor when not used.</p> |
| M2M_RXCLK/ M2P_TXCLK | 47 | I/O | - | <p>M2M_RXCLK Extension GMAC2 MII MAC Mode Receive Clock Input. In MII 100Mbps, M2M_RXCLK is 25MHz Clock Input. In MII 10Mbps, M2M_RXCLK is 2.5MHz Clock Input. Used to synchronize M2M_RXD[3:0], M2M_RXDV, and M2M_CRS. M2P_TXCLK Extension GMAC2 MII PHY Mode Transmit Clock Output. In MII 100Mbps, M2P_TXCLK is 25MHz Clock Output. In MII 10Mbps, M2P_TXCLK is 2.5MHz Clock Output. Used to synchronize M2P_RXD[3:0] and M2P_RXEN. This pin must be pulled low with a 1K ohm resistor when not used.</p> |
| M2M_RXDV/ M2P_TXEN | 48 | I | - | <p>M2M_RXDV Extension GMAC2 MII MAC Mode Receive Data Valid Input. Receive Data Valid sent synchronously at the rising edge of M2M_RXCLK. M2P_TXEN Extension GMAC2 MII PHY Mode Transmit Data Enable Input. Transmit Data Enable is received synchronously at the rising edge of M2P_TXCLK. This pin must be pulled low with a 1K ohm resistor when not used.</p> |
| M2M_RXD0/ M2P_RXD0 M2M_RXD1/ M2P_RXD1 M2M_RXD2/ M2P_RXD2 M2M_RXD3/ M2P_RXD3 | 49 50 51 52 | I | - | <p>M2M_RXD[3:0] Extension GMAC2 MII MAC Mode Receive Data Input. Received data that is received synchronously at the rising edge of M2M_RXCLK. M2P_RXD[3:0] Extension GMAC2 MII PHY Mode Transmit Data Input. Transmitted data is received synchronously at the rising edge of M2P_RXCLK. These pins must be pulled low with a 1K ohm resistor when not used.</p> |

7.3. LED Pins

The RTL8367RB-VB LED Pins can be configured to parallel mode LED or serial mode LED interface via Register configuration. LED0, LED1, and LED2 of Port n indicate information that can be defined via register or EEPROM.

In parallel mode LED interface, when the LED pin is pulled low, the LED output polarity will be high active. When the LED pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.

Table 8. LED Pins

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|------------------------|---------|-------------------|------------|--|
| P4LED2/ DIS_SPIS | 72 | I/O _{PU} | - | Port 4 LED2 Output Signal. P4LED2 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P4LED1 | 74 | I/O _{PU} | - | Port 4 LED1 Output Signal. P4LED1 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P4LED0/ EEPROM_MOD | 73 | I/O _{PU} | - | Port 4 LED0 Output Signal. P4LED0 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P3LED2/ EN_PWRLIGHT | 76 | I/O _{PU} | - | Port 3 LED2 Output Signal. P3LED2 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P3LED1 | 75 | I/O _{PU} | - | Port 3 LED1 Output Signal. P3LED1 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P3LED0/ RESERVED | 77 | I/O _{PU} | - | Port 3 LED0 Output Signal. P3LED0 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P2LED2/ DIS_8051 | 78 | I/O _{PU} | - | Port 2 LED2 Output Signal. P2LED2 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P2LED1 | 80 | I/O _{PU} | - | Port 2 LED1 Output Signal. P2LED1 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P2LED0/ DISAUTOLOAD | 79 | I/O _{PU} | - | Port 2 LED0 Output Signal. P2LED0 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P1LED2/ RESERVED | 81 | I/O _{PU} | - | Port 1 LED2 Output Signal. P1LED2 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P1LED1 | 83 | I/O _{PU} | - | Port 1 LED1 Output Signal. P1LED1 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P1LED0/ MID29 | 82 | I/O _{PU} | - | Port 1 LED0 Output Signal. P1LED0 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |

| Pin Name | Pin No. | Type | Drive (mA) | Description |
|-------------------------------|---------|-------------------|------------|--|
| P0LED2/ EN_PHY | 84 | I/O _{PU} | - | Port 0 LED2 Output Signal. P0LED2 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P0LED1/ LED_DA | 85 | I/O _{PU} | - | Port 0 LED1 Output Signal. P0LED1 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |
| P0LED0/ LED_CK/ SMI_SEL | 86 | I/O _{PU} | - | Port 0 LED0 Output Signal. P0LED0 indicates information is defined by register or EEPROM. See section 9.19 LED Indicators, page 43 for more details. |

7.4. Configuration Strapping Pins

Table 9. Configuration Strapping Pins

| Pin Name | Pin No. | Type | Description |
|------------------------|---------|-------------------|---|
| EEPROM_MOD/ P4LED0 | 73 | I/O _{PU} | EEPROM Mode Selection. Pull Up: EEPROM 24Cxx Size greater than 16Kbits (24C32~24C256) Pull Down: EEPROM 24Cxx Size less than or equal to 16Kbit (24C02~24C16). <i>Note: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i> <i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.</i> |
| DIS_SPIS/ P4LED2 | 72 | I/O _{PU} | SPI Slave Management Interface Selection. Pull Up: Disable SPI Slave Management Interface Pull Down: Enable SPI Slave Management Interface <i>Note: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i> <i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.</i> |
| EN_PWRLIGHT/ P3LED2 | 76 | I/O _{PU} | Enable Power on Light. Pull Up: Enable Power on Light <i>Pull Down: Disable Power on Light</i> <i>Note: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i> <i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.</i> |
| RESERVED/ P3LED0 | 77 | I/O _{PU} | Internal Use/Reserved. <i>Note: For normal operation, this pin must be pulled low via an external 4.7k ohm resistor upon power on or reset.</i> <i>When pulled low, the LED output polarity will be high active. See section 9.19 LED Indicators, page 43 for more details.</i> |

| Pin Name | Pin No. | Type | Description |
|------------------------|---------|-------------------|---|
| DIS_8051/ P2LED2 | 78 | I/O _{PU} | <p>Disable Embedded 8051. Pull Up: Disable embedded 8051 Pull Down: Enable embedded 8051</p> <p><i>Note 1: The strapping pin DISAUTOLOAD and DIS_8051 are for power on or reset initial stage configuration. Refer to Table 10 Configuration Strapping Pins (DISAUTOLOAD and DIS_8051), page 23 for details.</i></p> <p><i>Note 2: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i></p> <p><i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicator, page 43 for more details.</i></p> |
| DISAUTOLOAD/ P2LED0 | 79 | I/O _{PU} | <p>Disable EEPROM Autoload. Pull Up: Disable EEPROM autoload Pull Down: Enable EEPROM autoload</p> <p><i>Note 1: The strapping pin DISAUTOLOAD and DIS_8051 are for power on or reset initial stage configuration. Refer to Table 10 Configuration Strapping Pins (DISAUTOLOAD and DIS_8051), page 23 for details.</i></p> <p><i>Note 2: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i></p> <p><i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.</i></p> |
| RESERVED/ P1LED2 | 81 | I/O _{PU} | <p>Internal Use/Reserved.</p> <p><i>Note: This pin must be kept floating, or pulled high via an external 4.7k ohm resistor upon power on or reset.</i></p> <p><i>When pulled high, the LED output polarity will be low active. See section 9.19 LED Indicators, page 43 for more details.</i></p> |
| MID29/ P1LED0 | 82 | I/O _{PU} | <p>Select MID29. Pull Up: MII Management Interface PHY ID is 29 Pull Down: MII Management Interface PHY ID is 0</p> <p><i>Note: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i></p> <p><i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.</i></p> |
| EN_PHY/ P0LED2 | 84 | I/O _{PU} | <p>Enable Embedded PHY. Pull Up: Enable embedded PHY Pull Down: Disable embedded PHY</p> <p><i>Note: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i></p> <p><i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.</i></p> |

| Pin Name | Pin No. | Type | Description |
|-------------------------------|---------|-------------------|--|
| SMI_SEL/ LED_CK/ P0LED0 | 86 | I/O _{PU} | <p>EEPROM SMI/MII Management Interface Selection. Pull Up: EEPROM SMI interface when DIS_SPIS = 1 Pull Down: MII Management interface when DIS_SPIS = 1</p> <p><i>Note: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i></p> <p><i>When this pin is pulled low, the LED output polarity will be high active. When this pin is pulled high, the LED output polarity will change from high active to low active. See section 9.19 LED Indicators, page 43 for more details.</i></p> |
| DIS_LPD | 20 | I/O _{PU} | <p>Realtek Loop Detection Configuration. Pull Up: Disable Loop detection function Pull Down: Enable Loop detection function</p> <p><i>Note: This pin must be kept floating, or pulled high or low via an external 4.7k ohm resistor upon power on or reset.</i></p> |

7.4.1. Configuration Strapping Pins (DISAUTOLOAD and DIS_8051)

Table 10. Configuration Strapping Pins (DISAUTOLOAD and DIS_8051)

| DISAUTOLOAD | DIS_8051 | Initial Stage (Power On or Reset) Loading Data | |
|-------------|------------|--|----------------------------------|
| | | From | To |
| 0 | 0 | EEPROM | Register |
| | 1 | EEPROM | Embedded 8051 Instruction Memory |
| 1 | Irrelevant | Do Nothing | Do Nothing |

7.5. Management Interface Pins

Table 11. Management Interface Pins

| Pin Name | Pin No. | Type | Description |
|--------------------------|---------|-----------------|--|
| SPIS_nCSI | 92 | I _{PU} | <p>When DIS_SPIS is Pulled Low, SPI Slave Management Interface is Enabled. This pin acts as SPI slave mode Chip Selection Input pin.</p> <p>When DIS_SPIS is Pulled Up, SPI Slave Management Interface is Disabled. This pin is unused.</p> |
| SPIS_CK/ SCK/ MDC | 93 | O | <p>When DIS_SPIS is Pulled Low, SPI Slave Management Interface is Enabled. This pin acts as SPI slave mode Serial Clock Input pin.</p> <p>When DIS_SPIS is Pulled Up, SPI Slave Management Interface is Disabled. This pin acts as EEPROM SMI Interface Clock/MII Management Interface (MMD) Clock (selected via the hardware strapping pin, SMI_SEL).</p> |
| SPIS_DI/ SDA/ MDIO | 94 | I/O | <p>When DIS_SPIS is Pulled Low, SPI Slave Management Interface is Enabled. This pin acts as SPI slave mode Serial Data Input pin.</p> <p>When DIS_SPIS is Pulled Up, SPI Slave Management Interface is Disabled. This pin acts as EEPROM SMI Interface Data/MII Management Interface (MMD) Data (selected via the hardware strapping pin, SMI_SEL).</p> |
| SPIS_DO | 95 | O | <p>When DIS_SPIS is Pulled Low, SPI Slave Management Interface is Enabled. This pin acts as SPI slave mode Serial Data Output pin.</p> <p>When DIS_SPIS is Pulled Up, SPI Slave Management Interface is Disabled. This pin is unused.</p> |

| Pin Name | Pin No. | Type | Description |
|-----------|---------|-----------------|--|
| INTERRUPT | 19 | O _{PD} | Interrupt output when Interrupt even occurs. Active High by pull-down to GND via a 1K resister. Active Low by pull-up to DVDDIO via a 4.7K resister. |

7.6. Miscellaneous Pins

Table 12. Miscellaneous Pins

| Pin Name | Pin No. | Type | Description |
|---------------------|---------|-------------------|--|
| XTALO | 89 | AO | 25MHz Crystal Clock Output Pin. 25MHz +/-50ppm tolerance crystal output. |
| XTALI | 90 | AI | 25MHz Crystal Clock Input and Feedback Pin. 25MHz +/-50ppm tolerance crystal reference or oscillator input. When using a crystal, connect a loading capacitor from each pad to ground. When either using an oscillator or driving an external 25MHz clock from another device, XTALO should be kept floating. The maximum XTALI input voltage is 3.3V. |
| MDIREF | 13 | AO | Reference Resistor. A 2.49K ohm (1%) resistor must be connected between MDIREF and GND. |
| RESERVED | 35 | AO | Reserved. Must be left floating in normal operation. |
| RESERVED | 37 | AO | Reserved. Must be left floating in normal operation. |
| nRESET | 91 | I _{PU} | System Reset Input Pin. When low active will reset the RTL8367RB-VB. |
| GPIO00/ E2_CRS | 40 | I/O _{PD} | General Purpose Input/Output Interface IO00. |
| GPIO01/ E2_DO3 | 41 | I/O | General Purpose Input/Output Interface IO01. |
| GPIO02/ E2_DO2 | 42 | I/O | General Purpose Input/Output Interface IO02. |
| GPIO03/ E2_DO1 | 43 | I/O | General Purpose Input/Output Interface IO03. |
| GPIO04/ E2_DOO | 44 | I/O | General Purpose Input/Output Interface IO04. |
| GPIO05/ E2_DOEN | 45 | I/O | General Purpose Input/Output Interface IO05. |
| GPIO06/ E2_DOCLK | 46 | I/O | General Purpose Input/Output Interface IO06. |
| GPIO07/ E2_DICLK | 47 | I/O | General Purpose Input/Output Interface IO07. |
| GPIO08/ E2_DIDV | 48 | I/O | General Purpose Input/Output Interface IO08. |
| GPIO09/ E2_DIO | 49 | I/O | General Purpose Input/Output Interface IO09. |
| GPIO10/ E2_DII | 50 | I/O | General Purpose Input/Output Interface IO10. |

| Pin Name | Pin No. | Type | Description |
|-----------------------------------|---------|-------------------|--|
| GPIO11/ E2_DI2 | 51 | I/O | General Purpose Input/Output Interface IO11. |
| GPIO12/ E2_DI3 | 52 | I/O | General Purpose Input/Output Interface IO12. |
| GPIO13/ E1_CRS | 56 | I/O _{PD} | General Purpose Input/Output Interface IO13. |
| GPIO19/ E1_DO3 | 57 | I/O | General Purpose Input/Output Interface IO19. |
| GPIO20/ E1_DO2 | 58 | I/O | General Purpose Input/Output Interface IO20. |
| GPIO21/ E1_DO1 | 59 | I/O | General Purpose Input/Output Interface IO21. |
| GPIO22/ E1_DOO | 60 | I/O | General Purpose Input/Output Interface IO22. |
| GPIO23/ E1_DOEN | 61 | I/O | General Purpose Input/Output Interface IO23. |
| GPIO24/ E1_DOCLK | 62 | I/O | General Purpose Input/Output Interface IO24. |
| GPIO28/ E1_DICLK | 63 | I/O | General Purpose Input/Output Interface IO28. |
| GPIO29/ E1_DIDV | 64 | I/O | General Purpose Input/Output Interface IO29. |
| GPIO30/ E1_DIO | 65 | I/O | General Purpose Input/Output Interface IO30. |
| GPIO31/ E1_DII | 66 | I/O | General Purpose Input/Output Interface IO31. |
| GPIO32/ E1_DI2 | 67 | I/O | General Purpose Input/Output Interface IO32. |
| GPIO33/ E1_DI3 | 68 | I/O | General Purpose Input/Output Interface IO33. |
| GP O38/ P4LED2/ DIS_SPIS | 72 | I/O _{PU} | General Purpose Output Interface O38. |
| GP O39/ P4LED0/ EEPROM_MOD | 73 | I/O _{PU} | General Purpose Output Interface O39. |
| GPIO40/ P4LED1 | 74 | I/O _{PU} | General Purpose Input/Output Interface IO40. |
| GPIO41/ P3LED1 | 75 | I/O _{PU} | General Purpose Input/Output Interface IO41. |
| GP O42/ P3LED2/ EM_PWRLIGHT | 76 | I/O _{PU} | General Purpose Output Interface O42. |
| GP O43/ P3LED0/ RESERVED | 77 | I/O _{PU} | General Purpose Output Interface O43. |

| Pin Name | Pin No. | Type | Description |
|--|---------------|-------------------|--|
| GP O44/ P2LED2/ DIS_8051 | 78 | I/O _{PU} | General Purpose Output Interface O44. |
| GP O45/ P2LED0/ DISAUTOLOAD | 79 | I/O _{PU} | General Purpose Output Interface O45. |
| GPIO46/ P2LED1 | 80 | I/O _{PU} | General Purpose Input/Output Interface IO46. |
| GP O47/ P1LED2/ RESERVED | 81 | I/O _{PU} | General Purpose Output Interface O47. |
| GP O48/ P1LED0/ MID29 | 82 | I/O _{PU} | General Purpose Output Interface O48. |
| GPIO49/ P1LED1 | 83 | I/O _{PU} | General Purpose Input/Output Interface IO49. |
| GP O50/ P0LED2/ EN_PHY | 84 | I/O _{PU} | General Purpose Output Interface O50. |
| GPIO51/ P0LED1/ LED_DA | 85 | I/O _{PU} | General Purpose Input/Output Interface IO51. |
| GP O52/ P0LED0/ LED_CK/ SMI_SEL | 86 | I/O _{PU} | General Purpose Output Interface O52. |
| GPIO53/ SPIS_nCSI | 92 | I/O _{PU} | General Purpose Input/Output Interface IO53. |
| GPIO54/ SPIS_CK/ SCK/ MDC | 93 | I/O | General Purpose Input/Output Interface IO54. |
| GPIO55/ SPIS_DI/ SDA/ MDIO | 94 | I/O | General Purpose Input/Output Interface IO55. |
| GPIO56/ SPIS_DO | 95 | I/O | General Purpose Input/Output Interface IO56. |
| GPIO57/ INTERRUPT | 19 | I/O _{PD} | General Purpose Input/Output Interface IO57. |
| GP O58/ DIS_LPD | 20 | I/O _{PU} | General Purpose Output Interface O58. |
| NC | 22, 38, 87 | - | No Connection. |

7.7. Test Pins

Table 13. Test Pins

| Pin Name | Pin No. | Type | Description |
|----------|---------|------|---|
| RTT1 | 15 | AO | Reserved for Internal Use. Must be left floating. |
| RTT2 | 16 | AO | Reserved for Internal Use. Must be left floating. |
| ATESTCK | 117 | AO | Reserved for Internal Use. Must be left floating. |

7.8. Power and GND Pins

Table 14. Power and GND Pins

| Pin Name | Pin No. | Type | Description |
|----------|---|------|--|
| DVDDIO | 18, 70 | P | Digital I/O High Voltage Power for LED, Management Interface, nRESET, INTERRUPT, and DIS_LPD |
| DVDDIO_1 | 55, 69 | P | Digital I/O High Voltage Power for Extension Port 1 General Purpose Interface. |
| DVDDIO_2 | 39, 54 | P | Digital I/O High Voltage Power for Extension Port 2 General Purpose Interface. |
| DVDDL | 21, 53, 71 | P | Digital Low Voltage Power. |
| AVDDH | 1, 11, 17, 23, 33, 36, 88, 96, 106, 119 | AP | Analog High Voltage Power. |
| AVDDL | 6, 14, 28, 34, 101, 111, 124 | AP | Analog Low Voltage Power. |
| PLLVDDL | 116 | AP | PLL Low Voltage Power. |
| GND | EPAD | G | GND. |
| AGND | 12 | AG | Analog GND. |
| PLLGND | 118 | AG | PLL GND. |

8. Physical Layer Functional Overview

8.1. MDI Interface

The RTL8367RB-VB embeds five 10/100/1000M Ethernet PHYs in one chip. Each port uses a single common MDI interface to support 1000Base-T, 100Base-TX, and 10Base-T. This interface consists of four signal pairs-A, B, C, and D. Each signal pair consists of two bi-directional pins that can transmit and receive at the same time. The MDI interface has internal termination resistors, and therefore reduces BOM cost and PCB complexity. For 1000Base-T, all four pairs are used in both directions at the same time. For 10/100 links and during auto-negotiation, only pairs A and B are used.

8.2. 1000Base-T Transmit Function

The 1000Base-TX transmit function performs 8B/10B coding, scrambling, and 4D-PAM5 encoding. These code groups are passed through a waveform-shaping filter to minimize EMI effects, and are transmitted onto 4-pair CAT5 cable at 125MBaud/s through a D/A converter.

8.3. 1000Base-T Receive Function

Input signals from the media pass through the sophisticated on-chip hybrid circuit to subtract the transmitted signal from the input signal for effective reduction of near-end echo. The received signal is then processed with state-of-the-art technology, e.g., adaptive equalization, BLW (Baseline Wander) correction, cross-talk cancellation, echo cancellation, timing recovery, error correction, and 4D-PAM5 decoding. The 8-bit-wide data is recovered and is sent to the GMII interface at a clock speed of 125MHz. The RX MAC retrieves the packet data from the internal receive MII/GMII interface and sends it to the packet buffer manager.

8.4. 100Base-TX Transmit Function

The 100Base-TX transmit function performs parallel to serial conversion, 4B/5B coding, scrambling, NRZ/NRZI conversion, and MLT-3 encoding. The 5-bit serial data stream after 4B/5B coding is then scrambled as defined by the TP-PMD Stream Cipher function to flatten the power spectrum energy such that EMI effects can be reduced significantly.

The scrambled seed is based on PHY addresses and is unique for each port. After scrambling, the bit stream is driven onto the network media in the form of MLT-3 signaling. The MLT-3 multi-level signaling technology moves the power spectrum energy from high frequency to low frequency, which also reduces EMI emissions.

8.5. 100Base-TX Receive Function

The receive path includes a receiver composed of an adaptive equalizer and DC restoration circuits (to compensate for an incoming distorted MLT-3 signal), an MLT-3 to NRZI and NRZI to NRZ converter to convert analog signals to digital bit-stream, and a PLL circuit to clock data bits with minimum bit error rate. A de-scrambler, 5B/4B decoder, and serial-to-parallel conversion circuits are followed by the PLL circuit. Finally, the converted parallel data is fed into the MAC.

8.6. 10Base-T Transmit Function

The output 10Base-T waveform is Manchester-encoded before it is driven onto the network media. The internal filter shapes the driven signals to reduce EMI emissions, eliminating the need for an external filter.

8.7. 10Base-T Receive Function

The Manchester decoder converts the incoming serial stream to NRZ data when the squelch circuit detects the signal level is above squelch level.

8.8. Auto-Negotiation for UTP

The RTL8367RB-VB obtains the states of duplex, speed, and flow control ability for each port in UTP mode through the auto-negotiation mechanism defined in the IEEE 802.3 specifications. During auto-negotiation, each port advertises its ability to its link partner and compares its ability with advertisements received from its link partner. By default, the RTL8367RB-VB advertises full capabilities (1000Full, 100Full, 100Half, 10Full, 10Half) together with flow control ability.

8.9. Crossover Detection and Auto Correction

The RTL8367RB-VB automatically determines whether or not it needs to crossover between pairs (see Table 15) so that an external crossover cable is not required. When connecting to another device that does not perform MDI crossover, when necessary, the RTL8367RB-VB automatically switches its pin pairs to communicate with the remote device. When connecting to another device that does have MDI crossover capability, an algorithm determines which end performs the crossover function.

The crossover detection and auto correction function can be disabled via register configuration. The pin mapping in MDI and MDI Crossover mode is given below.

Table 15. Media Dependent Interface Pin Mapping

| Pairs | MDI | | | MDI Crossover | | |
|-------|------------|------------|----------|---------------|------------|----------|
| | 1000Base-T | 100Base-TX | 10Base-T | 1000Base-T | 100Base-TX | 10Base-T |
| A | A | TX | TX | B | RX | RX |
| B | B | RX | RX | A | TX | TX |
| C | C | Unused | Unused | D | Unused | Unused |
| D | D | Unused | Unused | C | Unused | Unused |

8.10. Polarity Correction

The RTL8367RB-VB automatically corrects polarity errors on the receiver pairs in 1000Base-T and 10Base-T modes. In 100Base-TX mode, the polarity is irrelevant.

In 1000Base-T mode, receive polarity errors are automatically corrected based on the sequence of idle symbols. Once the de-scrambler is locked, the polarity is also locked on all pairs. The polarity becomes unlocked only when the receiver loses lock.

In 10Base-T mode, polarity errors are corrected based on the detection of valid spaced link pulses. The detection begins during the MDI crossover detection phase and locks when the 10Base-T link is up. The polarity becomes unlocked when the link is down.

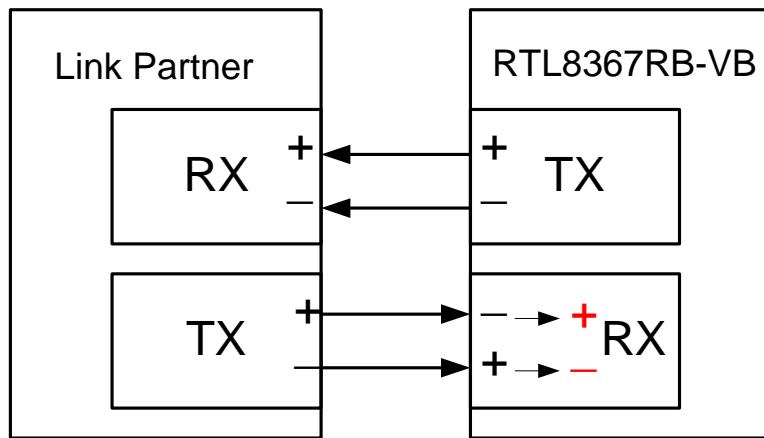

Figure 5. Conceptual Example of Polarity Correction

9. General Function Description

9.1. Reset

9.1.1. Hardware Reset

In a power-on reset, an internal power-on reset pulse is generated and the RTL8367RB-VB will start the reset initialization procedures. These are:

- Determine various default settings via the hardware strap pins at the end of the nRESET signal
- Autoload the configuration from EEPROM if EEPROM is detected
- Complete the embedded SRAM BIST process
- Initialize the packet buffer descriptor allocation
- Initialize the internal registers and prepare them to be accessed by the external CPU

9.1.2. Software Reset

The RTL8367RB-VB supports two software resets; a chip reset and a soft reset.

9.1.2.1 CHIP_RESET

When CHIP_RESET is set to 0b1 (write and self-clear), the chip will take the following steps:

1. Download configuration from strap pin and EEPROM
2. Start embedded SRAM BIST (Built-In Self Test)
3. Clear all the Lookup and VLAN tables
4. Reset all registers to default values
5. Restart the auto-negotiation process

9.1.2.2 SOFT_RESET

When SOFT_RESET is set to 0b1 (write and self-clear), the chip will take the following steps:

1. Clear the FIFO and re-start the packet buffer link list
2. Restart the auto-negotiation process

9.2. IEEE 802.3x Full Duplex Flow Control

The RTL8367RB-VB supports IEEE 802.3x flow control in 10/100/1000M modes. Flow control can be decided in two ways:

- When Auto-Negotiation is enabled, flow control depends on the result of NWay
- When Auto-Negotiation is disabled, flow control depends on register definition

9.3. Half Duplex Flow Control

In half duplex mode, the CSMA/CD media access method is the means by which two or more stations share a common transmission medium. To transmit, a station waits (defers) for a quiet period on the medium (that is, no other station is transmitting) and then sends the intended message in bit-serial form. If the message collides with that of another station, then each transmitting station intentionally transmits for an additional predefined period to ensure propagation of the collision throughout the system. The station remains silent for a random amount of time (backoff) before attempting to transmit again.

When a transmission attempt has terminated due to a collision, it is retried until it is successful. The scheduling of the retransmissions is determined by a controlled randomization process called “Truncated Binary Exponential Backoff”. At the end of enforcing a collision (jamming), the switch delays before attempting to retransmit the frame. The delay is an integer multiple of slot time (512 bit times). The number of slot times to delay before the nth retransmission attempt is chosen as a uniformly distributed random integer ‘r’ in the range:

$$0 \leq r < 2k$$

where:

$k = \min(n, \text{backoffLimit})$. The backoffLimit for the RTL8367RB-VB is 9.

The half duplex back-off algorithm in the RTL8367RB-VB does not have the maximum retry count limitation of 16 (as defined in IEEE 802.3). This means packets in the switch will not be dropped if the back-off retry count is over 16.

9.3.1. Back-Pressure Mode

In Back-Pressure mode, the RTL8367RB-VB sends a 4-byte jam pattern (data=0xAA) to collide with incoming packets when congestion control is activated. The Jam pattern collides at the fourth byte counted from the preamble. The RTL8367RB-VB supports 48PASS1, which receives one packet after 48 consecutive jam collisions (data collisions are not included in the 48). Enable this function to prevent port partition after 63 consecutive collisions (data collisions + consecutive jam collisions).

9.4. Search and Learning

Search

When a packet is received, the RTL8367RB-VB uses the destination MAC address, Filtering Identifier (FID) and Enhanced Filtering Identifier (EFID) to search the 2K-entry look-up table. The 48-bit MAC address, 4-bit FID and 3-bit EFID use a hash algorithm, to calculate an 11-bit index value. The RTL8367RB-VB uses the index to compare the packet MAC address with the entries (MAC addresses) in the look-up table. This is the ‘Address Search’. If the destination MAC address is not found, the switch will broadcast the packet according to VLAN configuration.

Learning

The RTL8367RB-VB uses the source MAC address, FID, and EFID of the incoming packet to hash into a 9-bit index. It then compares the source MAC address with the data (MAC addresses) in this index. If there is a match with one of the entries, the RTL8367RB-VB will update the entry with new information. If there is no match and the 2K entries are not all occupied by other MAC addresses, the RTL8367RB-VB will record the source MAC address and ingress port number into an empty entry. This process is called ‘Learning’.

Address aging is used to keep the contents of the address table correct in a dynamic network topology. The look-up engine will update the time stamp information of an entry whenever the corresponding source MAC address appears. An entry will be invalid (aged out) if its time stamp information is not refreshed by the address learning process during the aging time period. The aging time of the RTL8367RB-VB is between 200 and 400 seconds (typical is 300 seconds).

9.5. SVL and IVL/SVL

The RTL8367RB-VB supports a 16-group Filtering Identifier (FID) for L2 search and learning. In default operation, all VLAN entries belong to the same FID. This is called Shared VLAN Learning (SVL). If VLAN entries are configured to different FIDs, then the same source MAC address with multiple FIDs can be learned into different look-up table entries. This is called Independent VLAN Learning and Shared VLAN Learning (IVL/SVL).

9.6. Illegal Frame Filtering

Illegal frames such as CRC error packets, runt packets (length <64 bytes), and oversize packets (length >maximum length) will be discarded by the RTL8367RB-VB. The maximum packet length may be set from 1518 bytes to 16K bytes.

9.7. IEEE 802.3 Reserved Group Addresses Filtering Control

The RTL8367RB-VB supports the ability to drop/forward IEEE 802.3 specified reserved group MAC addresses: 01-80-C2-00-00-00 to 01-80-C2-00-00-2F. The default setting enables forwarding of these reserved group MAC address control frames. Frames with group MAC address 01-80-C2-00-00-01 (802.3x Pause) and 01-80-C2-00-00-02 (802.3ad LACP) will always be filtered. Table 16 shows the Reserved Multicast Address (RMA) configuration mode from 01-80-C2-00-00-00 to 01-80-C2-00-00-2F.

Table 16. Reserved Multicast Address Configuration Table

| Assignment | Value |
|---|---|
| Bridge Group Address | 01-80-C2-00-00-00 |
| IEEE Std 802.3, 1988 Edition, Full Duplex PAUSE Operation | 01-80-C2-00-00-01 |
| IEEE Std 802.3ad Slow Protocols-Multicast Address | 01-80-C2-00-00-02 |
| IEEE Std 802.1X PAE Address | 01-80-C2-00-00-03 |
| Provider Bridge Group Address | 01-80-C2-00-00-08 |
| Undefined 802.1 Address | 01-80-C2-00-00-04 ~ 01-80-C2-00-00-07 & 01-80-C2-00-00-09 ~ 01-80-C2-00-00-0C & 01-80-C2-00-00-0F |
| Provider Bridge MVRP Address | 01-80-C2-00-00-0D |
| IEEE Std 802.1AB Link Layer Discovery Protocol Address | 01-80-C2-00-00-0E |
| All LANs Bridge Management Group Address | 01-80-C2-00-00-10 |
| Load Server Generic Address | 01-80-C2-00-00-11 |
| Loadable Device Generic Address | 01-80-C2-00-00-12 |
| Undefined 802.1 Address | 01-80-C2-00-00-13 ~ 01-80-C2-00-00-17 & 01-80-C2-00-00-19 & 01-80-C2-00-00-1B ~ 01-80-C2-00-00-1F |
| Generic Address for All Manager Stations | 01-80-C2-00-00-18 |
| Generic Address for All Agent Stations | 01-80-C2-00-00-1a |
| GMRP Address | 01-80-C2-00-00-20 |
| GVRP Address | 01-80-C2-00-00-21 |
| Undefined GARP Address | 01-80-C2-00-00-22 01-80-C2-00-00-2F |
| CDP(Cisco Discovery Protocol) | 01-00-0C-CC-CC-CC |
| CSSTP(Cisco Shared Spanning Tree Protocol) | 01-00-0C-CC-CC-CD |
| LLDP | (01:80:c2:00:00:0e or 01:80:c2:00:00:03 or 01:80:c2:00:00:00) && ethertype = 0x88CC |

9.8. Broadcast/Multicast/Unknown DA Storm Control

The RTL8367RB-VB enables or disables per-port broadcast/multicast/unknown DA storm control by setting registers (default is disabled). After the receiving rate of broadcast/multicast/unknown DA packets exceeds a reference rate (number of Kbps per second or number of packets per second), all other broadcast/multicast/unknown DA packets will be dropped. The reference rate is set via register configuration.

9.9. Port Security Function

The RTL8367RB-VB supports three types of security function to prevent malicious attacks:

- Per-port enable/disable SA auto-learning for an ingress packet
- Per-port enable/disable look-up table aging update function for an ingress packet
- Per-port enable/disable drop all unknown DA packets

9.10. MIB Counters

The RTL8367RB-VB supports a set of counters to support management functions.

- MIB-II (RFC 1213)
- Ethernet-Like MIB (RFC 3635)
- Interface Group MIB (RFC 2863)
- RMON (RFC 2819)
- Bridge MIB (RFC 1493)
- Bridge MIB Extension (RFC 2674)

9.11. Port Mirroring

The RTL8367RB-VB supports one set of port mirroring functions for all ports. The TX, or RX, or both TX/RX packets from multiple mirrored port can be mirrored to one monitor port.

9.12. VLAN Function

The RTL8367RB-VB supports 4K VLAN groups. These can be configured as port-based VLANs, IEEE 802.1Q tag-based VLANs, and Protocol-based VLANs. Two ingress-filtering and egress-filtering options provide flexible VLAN configuration:

Ingress Filtering

- The acceptable frame type of the ingress process can be set to ‘Admit All’, ‘Admit only Untagged’ or ‘Admit only Tagged’
- ‘Admit’ or ‘Discard’ frames associated with a VLAN for which that port is not in the member set

Egress Filtering

- ‘Forward’ or ‘Discard’ Leaky VLAN frames between different VLAN domains
- ‘Forward’ or ‘Discard’ Multicast VLAN frames between different VLAN domains

The VLAN tag can be inserted or removed at the output port. The RTL8367RB-VB will insert a Port VID (PVID) for untagged frames, or remove the tag from tagged frames. The RTL8367RB-VB also supports a special insert VLAN tag function to separate traffic from the WAN and LAN sides in Router and Gateway applications.

In router applications, the router may want to know which input port this packet came from. The RTL8367RB-VB supports Port VID (PVID) for each port and can insert a PVID in the VLAN tag on egress. Using this function, VID information carried in the VLAN tag will be changed to PVID. The RTL8367RB-VB also provides an option to admit VLAN tagged packets with a specific PVID only. If this function is enabled, it will drop non-tagged packets and packets with an incorrect PVID.

9.12.1. Port-Based VLAN

This default configuration of the VLAN function can be modified via an attached serial EEPROM or EEPROM SMI Slave interface. The 4K-entry VLAN Table designed into the RTL8367RB-VB provides full flexibility for users to configure the input ports to associate with different VLAN groups. Each input port can join with more than one VLAN group.

Port-based VLAN mapping is the simplest implicit mapping rule. Each ingress packet is assigned to a VLAN group based on the input port. It is not necessary to parse and inspect frames in real-time to determine their VLAN association. All the packets received on a given input port will be forwarded to this port’s VLAN members.

9.12.2. IEEE 802.1Q Tag-Based VLAN

The RTL8367RB-VB supports 4K VLAN entries to perform 802.1Q tag-based VLAN mapping. In 802.1Q VLAN mapping, the RTL8367RB-VB uses a 12-bit explicit identifier in the VLAN tag to associate received packets with a VLAN. The RTL8367RB-VB compares the explicit identifier in the VLAN tag with the 4K VLAN Table to determine the VLAN association of this packet, and then forwards this packet to the member set of that VLAN. Two VIDs are reserved for special purposes. One of them is all 1’s, which is reserved and currently unused. The other is all 0’s, which indicates a priority tag. A priority-tagged frame should be treated as an untagged frame.

When ‘802.1Q tag aware VLAN’ is enabled, the RTL8367RB-VB performs 802.1Q tag-based VLAN mapping for tagged frames, but still performs port-based VLAN mapping for untagged frames. If ‘802.1Q tag aware VLAN’ is disabled, the RTL8367RB-VB performs only port-based VLAN mapping both on non-tagged and tagged frames. The processing flow when ‘802.1Q tag aware VLAN’ is enabled is illustrated below.

Two VLAN ingress filtering functions are supported in registers by the RTL8367RB-VB. One is the ‘VLAN tag admit control’, which provides the ability to receive VLAN-tagged frames only. Untagged or priority tagged (VID=0) frames will be dropped. The other is ‘VLAN member set ingress filtering’, which will drop frames if the ingress port is not in the member set.

9.12.3. Protocol-Based VLAN

The RTL8367RB-VB supports a 4-group Protocol-based VLAN configuration. The packet format can be RFC 1042, LLC, or Ethernet, as shown in Figure 6. There are 4 configuration tables to assign the frame type and corresponding field value. Taking IP packet configuration as an example, the user can configure the frame type to be ‘Ethernet’, and value to be ‘0x0800’. Each table will index to one of the entries in the 4K-entry VLAN table. The packet stream will match the protocol type and the value will follow the VLAN member configuration of the indexed entry to forward the packets.

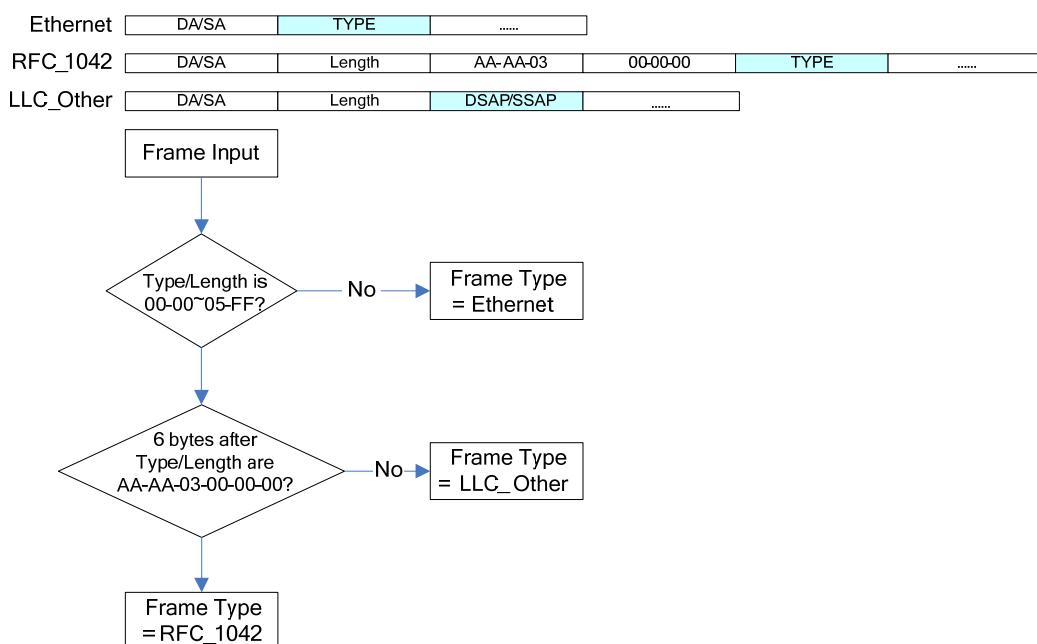

Figure 6. Protocol-Based VLAN Frame Format and Flow Chart

9.12.4. Port VID

In a router application, the router may want to know which input port this packet came from. The RTL8367RB-VB supports Port VID (PVID) for each port to insert a PVID in the VLAN tag for untagged or priority tagged packets on egress. When 802.1Q tag-aware VLAN is enabled, VLAN tag admit control is enabled, and non-PVID Discard is enabled at the same time. When these functions are enabled, the RTL8367RB-VB will drop non-tagged packets and packets with an incorrect PVID.

9.13. QoS Function

The RTL8367RB-VB supports 8 priority queues and input bandwidth control. Packet priority selection can depend on Port-based priority, 802.1p/Q Tag-based priority, IPv4/IPv6 DSCP-based priority, and ACL-based priority. When multiple priorities are enabled in the RTL8367RB-VB, the packet's priority will be assigned based on the priority selection table.

Each queue has one leaky bucket for Average Packet Rate. Per-queue in each output port can be set as Strict Priority (SP) or Weighted Fair Queue (WFQ) for packet scheduling algorithm.

9.13.1. Input Bandwidth Control

Input bandwidth control limits the input bandwidth. When input traffic is more than the RX Bandwidth parameter, this port will either send out a ‘pause ON’ frame, or drop the input packet depending on register setup. Per-port input bandwidth control rates can be set from 8Kbps to 1Gbps (in 8Kbps steps).

9.13.2. Priority Assignment

Priority assignment specifies the priority of a received packet according to various rules. The RTL8367RB-VB can recognize the QoS priority information of incoming packets to give a different egress service priority.

The RTL8367RB-VB identifies the priority of packets based on several types of QoS priority information:

- Port-based priority
- 802.1p/Q-based priority
- IPv4/IPv6 DSCP-based priority
- ACL-based priority
- VLAN-based priority
- MAC-based priority
- SVLAN-based priority

9.13.3. Priority Queue Scheduling

The RTL8367RB-VB supports MAX-MIN packet scheduling.

Packet scheduling offers two modes:

- Average Packet Rate (APR) leaky bucket, which specifies the average rate of one queue
- Weighted Fair Queue (WFQ), which decides which queue is selected in one slot time to guarantee the minimal packet rate of one queue

In addition, each queue of each port can select Strict Priority or WFQ packet scheduling according to packet scheduling mode. Figure 7 shows the RTL8367RB-VB packet-scheduling diagram.

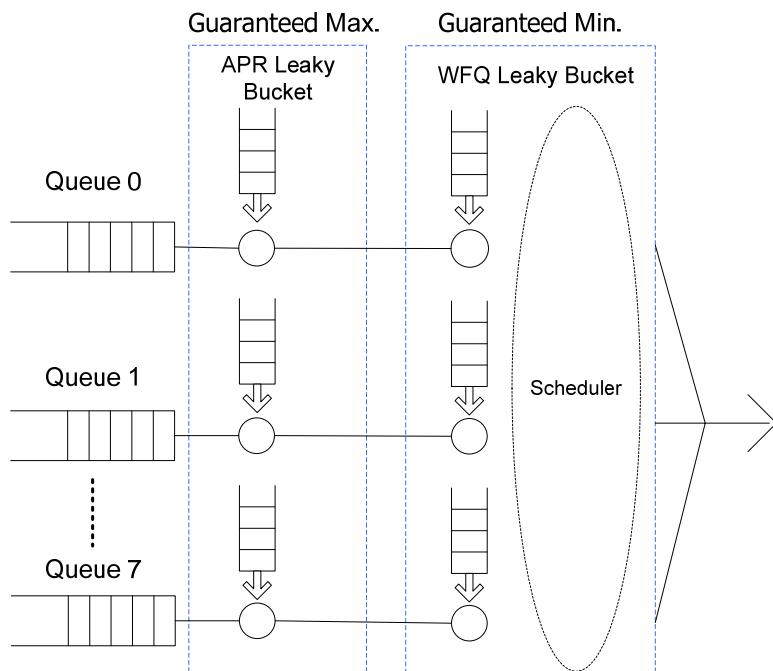

Figure 7. RTL8367RB-VB MAX-MIN Scheduling Diagram

9.13.4. IEEE 802.1p/Q and DSCP Remarkering

The RTL8367RB-VB supports the IEEE 802.1p/Q and IP DSCP (Differentiated Services Code Point) remarking function. When packets egress from one of the 8 queues, the packet's 802.1p/Q priority and IP DSCP can optionally be remarked to a configured value. 802.1p/Q priority & IP DSCP value can be remarked based on internal priority or original 802.1p/Q priority & IP DSCP value in packets.

9.13.5. ACL-Based Priority

The RTL8367RB-VB supports 96-entry ACL (Access Control List) rules. When a packet is received, its physical port, Layer2, Layer3, and Layer4 information are recorded and compared to ACL entries.

If a received packet matches multiple entries, the entry with the lowest address is valid. If the entry is valid, the action bit and priority bit will be applied.

- If the action bit is ‘Drop’, the packet will be dropped. If the action bit is ‘CPU’, the packet will be trapped to the CPU instead of forwarded to non-CPU ports (except where it will be dropped by rules other than the ACL rule)
- If the action bit is ‘Permit’, ACL rules will override other rules
- If the action bit is ‘Mirror’, the packet will be forwarded to the mirror port and the L2 lookup result destination port. The mirror port indicates the port configured in the port mirror mechanism
- The priority bit will take effect only if the action bit is ‘CPU’, ‘Permit’, and ‘Mirror’. The Priority bit is used to determine the packet queue ID according to the priority assignment mechanism

9.14. IGMP & MLD Snooping Function

The RTL8367RB-VB supports hardware IGMPv1/v2/v3 and MLDv1/v2 snooping with a maximum of 256 groups (maximum 255 groups per port). These multicast groups are learned and deleted/aged out automatically. For data packets of a known multicast group, the RTL8367RB-VB forwards them according to the learned group membership.

The RTL8367RB-VB checks group membership every 125 seconds (default). If a specified port of the RTL8367RB-VB does not receive a report message after 3 (default) consecutive checks, the port is removed from the multicast group. The 125 second interval and the number of consecutive checks before ageing are user configurable default values.

IPv4 multicast data packets are forwarded per group IP. IPv6 multicast data packets are forwarded per destination MAC. That is, IPv6 multicast groups that share the same destination MAC are treated as the same group. This is called address ambiguity.

Some reserved range IP addresses will always be flooded to all ports. If IGMP or MLD report message requests to join these groups, this request will be ignored silently. These reserved IP addresses could be the following IP addresses and they are configurable.

IPv4: 224.0.0.0 ~ 224.0.0.255

IPv4: 224.0.1.0 ~ 224.0.1.255

IPv4: 239.255.255.0 ~ 239.255.255.255

IPv6: 33:33:00:00:00:00 ~ 33:33:00:00:00:FF (forwarded per destination MAC)

Due to address ambiguity, some IPv6 multicast addresses that are not reserved for network protocols will be flooded, as the corresponding destination MAC address is inside the reserved IP address range (Corresponding MAC address).

The RTL8367RB-VB learns the ‘Dynamic Router Port’ automatically by monitoring Query messages (both IGMP & MLD) and multicast routing protocol packets. Table 17 gives the multicast routing protocols that the RTL8367RB-VB recognizes. PIMv1 is confirmed by the IGMP header type and the other multicast routing protocols are recognized by the destination IP in the IP header (in both IPv4 and IPv6).

Table 17. IPv4/IPv6 Multicast Routing Protocols

| IPv4 | IPv6 | Multicast Routing Protocol |
|-------------|-------------|-------------------------------------|
| N/A | N/A | Check IGMP Header Type=0x14 (PIMv1) |
| 224.0.0.13 | FF02::D | PIMv2 |
| 224.0.0.4 | FF02::4 | DVMRP |
| 224.0.0.5 | FF02::5 | MOSPF |
| 224.0.0.6 | FF02::6 | MOSPF |

Users can specify ‘Static Router Ports’ via API. This forces the ports to act as true router ports. All reports and Leave/Done messages will be forwarded to the specified Static Router ports.

The RTL8367RB-VB supports a ‘Fast Leave’ feature. When enabled, group membership will be removed immediately the RTL8367RB-VB receives an IGMPv2 Leave message or MLDv1 Done message. Normally this feature is only enabled when there is only one host.

The IGMP/MLD snooping feature is disabled by default. IGMP & MLD messages will be flooded to all ports without any further processing. This feature can be enabled and configured via API. Contact your Realtek support team for configuration details.

9.15. IEEE 802.1x Function

The RTL8367RB-VB supports IEEE 802.1x Port-based/MAC-based Access Control.

- Port-Based Access Control for each port
- Authorized Port-Based Access Control for each port
- Port-Based Access Control Direction for each port
- MAC-Based Access Control for each port
- MAC-Based Access Control Direction
- Optional Unauthorized Behavior
- Guest VLAN

9.15.1. Port-Based Access Control

Each port of the RTL8367RB-VB can be set to 802.1x port-based authenticated checking function usage and authorized status. Ports with 802.1X unauthorized status will drop received/transmitted frames.

9.15.2. Authorized Port-Based Access Control

If a dedicated port is set to 802.1x port-based access control, and passes the 802.1x authorization, then its port authorization status can be set to authorized.

9.15.3. Port-Based Access Control Direction

Ports with 802.1X unauthorized status will drop received/transmitted frames only when port authorization direction is ‘BOTH’. If the authorization direction of an 802.1X unauthorized port is IN, incoming frames to that port will be dropped, but outgoing frames will be transmitted.

9.15.4. MAC-Based Access Control

MAC-Based Access Control provides authentication for multiple logical ports. Each logical port represents a source MAC address. There are multiple logical ports for a physical port. When a logical port or a MAC address is authenticated, the relevant source MAC address has the authorization to access the network. A frame with a source MAC address that is not authenticated by the 802.1x function will be dropped or trapped to the CPU.

9.15.5. MAC-Based Access Control Direction

Unidirectional and Bi-directional control are two methods used to process frames in 802.1x. As the system cannot predict which port the DA is on, a system-wide MAC-based access control direction setup is provided for determining whether receiving or bi-direction should be authorized.

If MAC-based access control direction is BOTH, then received frames with unauthenticated SA or unauthenticated DA will be dropped. When MAC-based access control direction is IN, only received frames with unauthenticated SA will be dropped.

9.15.6. Optional Unauthorized Behavior

Both in Port-Based Network Access Control and MAC-Based Access Control, a whole system control setup is provided to determine unauthorized frame dropping, trapping to CPU, or tagging as belonging to a Guest VLAN (see the following ‘Guest VLAN’ section).

9.15.7. Guest VLAN

When the RTL8367RB-VB enables the Port-based or MAC-based 802.1x function, and the connected PC does not support the 802.1x function or does not pass the authentication procedure, the RTL8367RB-VB will drop all packets from this port.

The RTL8367RB-VB also supports one Guest VLAN to allow unauthorized ports or packets to be forwarded to a limited VLAN domain. The user can configure one VLAN ID and member set for these unauthorized packets.

9.16. IEEE 802.1D Function

When using IEEE 802.1D, the RTL8367RB-VB supports 16 sets and four status^{*} for each port for CPU implementation 802.1D (STP) and 802.1s (MSTP) function:

- Disabled: The port will not transmit/receive packets, and will not perform learning
- Blocking: The port will only receive BPDU spanning tree protocol packets, but will not transmit any packets, and will not perform learning
- Learning: The port will receive any packet, including BPDU spanning tree protocol packets, and will perform learning, but will only transmit BPDU spanning tree protocol packets
- Forwarding: The port will transmit/receive all packets, and will perform learning

The RTL8367RB-VB also supports a per-port transmission/reception enable/disable function. Users can control the port state via register.

9.17. Embedded 8051

An 8051 MCU is embedded in the RTL8367RB-VB to support management functions. The 8051 MCU can access all of the registers in the RTL8367RB-VB through the internal bus. With the Network Interface Circuit (NIC) acting as the data path, the 8051 MCU connects to the switch core and can

transmit frames to or receive frames from the Ethernet network. The features of the 8051 MCU are listed below:

- 256 Bytes fast internal RAM
- On-chip 48K data memory
- On-chip 16K code memory
- Supports code-banking
- 12KBytes NIC buffer
- EEPROM read/write ability

9.18. Realtek Cable Test (RTCT)

The RTL8367RB-VB physical layer transceivers use DSP technology to implement the Realtek Cable Test (RTCT) feature. The RTCT function can be used to detect short, open, or impedance mismatch in each differential pair. The RTL8367RB-VB also provides LED support to indicate test status and results.

9.19. LED Indicators

The RTL8367RB-VB supports parallel LEDs for each port. Each port has three LED indicator pins, LED0, LED1, and LED2. Each pin may have different indicator information (defined in Table 18). Refer to section 7.3 LED Pins, page 20 for pin details. Upon reset, the RTL8367RB-VB supports chip diagnostics and LED operation test by blinking all LEDs once.

Table 18. LED Definitions

| LED Statuses | Description |
|-----------------|---|
| LED_Off | LED Pin Output Disable. |
| Dup/Col | Duplex/Collision Indicator. Blinking when collision occurs. Low for full duplex, and high for half duplex mode. |
| Link/Act | Link, Activity Indicator. Low for link established. Link/Act Blinking when the corresponding port is transmitting or receiving. |
| Spd1000 | 1000Mbps Speed Indicator. Low for 1000Mbps. |
| Spd100 | 100Mbps Speed Indicator. Low for 100Mbps. |
| Spd10 | 10Mbps Speed Indicator. Low for 10Mbps. |
| Spd1000/Act | 1000Mbps Speed/Activity Indicator. Low for 1000Mbps. Blinking when the corresponding port is transmitting or receiving. |
| Spd100/Act | 100Mbps Speed/Activity Indicator. Low for 100Mbps. Blinking when the corresponding port is transmitting or receiving. |
| Spd10/Act | 10Mbps Speed/Activity Indicator. Low for 10Mbps. Blinking when the corresponding port is transmitting or receiving. |
| Spd100 (10)/Act | 10/100Mbps Speed/Activity Indicator. Low for 10/100Mbps. Blinking when the corresponding port is transmitting or receiving. |
| Act | Activity Indicator. Act blinking when the corresponding port is transmitting or receiving. |

The LED pin also supports pin strapping configuration functions. The PnLED0, PnLED1, and PnLED2 pins are dual-function pins: input operation for configuration upon reset, and output operation for LED after reset. When the pin input is pulled high upon reset, the pin output is active low after reset. When the pin input is pulled down upon reset, the pin output is active high after reset. For details refer to Figure 8, page 44, and Figure 9, page 44. Typical values for pull-up/pull-down resistors are 4.7KΩ.

The PnLED1 can be combined with PnLED1 or PnLED2 as a Bi-color LED.

LED_PnLED1 should operate with the same polarity as other Bi-color LED pins. For example:

- P0LED1 should be pulled up upon reset if P0LED1 is combined with P0LED2 as a Bi-color LED, and P0LED2 input is pulled high upon reset. In this configuration, the output of these pins is active low after reset
- P0LED1 should be pulled down upon reset if P0LED1 is combined with P0LED2 as a Bi-color LED, and P0LED2 input is pulled down upon reset. In this configuration, the output of these pins is active high after reset

Upon reset, the RTL8367RB-VB supports chip diagnostics and LED functions by blinking all LEDs once. This function can be disabled by asserting EN_PWRLIGHT to 0b0 (pull down).

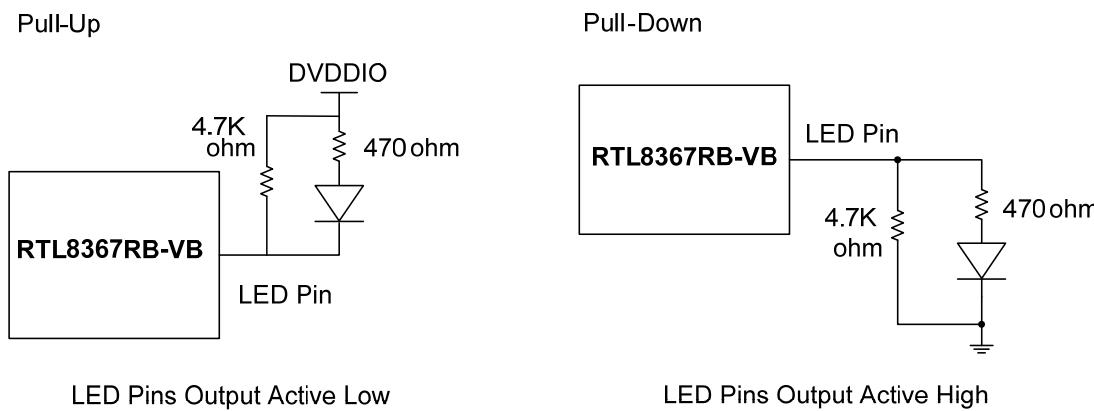

Figure 8. Pull-Up and Pull-Down of LED Pins for Single-Color LED

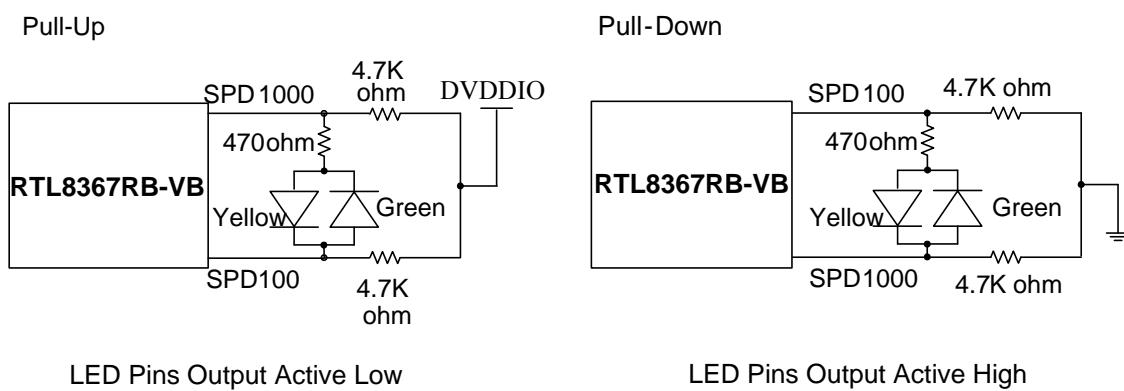

Figure 9. Pull-Up and Pull-Down of LED Pins for Bi-Color LED

9.20. Green Ethernet

9.20.1. Link-On and Cable Length Power Saving

The RTL8367RB-VB provides link-on and dynamic detection of cable length and dynamic adjustment of power required for the detected cable length. This feature provides high performance with minimum power consumption.

9.20.2. Link-Down Power Saving

The RTL8367RB-VB implements link-down power saving on a per-port basis, greatly cutting power consumption when the network cable is disconnected. After it detects an incoming signal, it wakes up from link-down power saving and operates in normal mode.

9.21. IEEE 802.3az Energy Efficient Ethernet (EEE) Function

The RTL8367RB-VB supports IEEE 802.3az Energy Efficient Ethernet ability for 1000Base-T and 100Base-TX in full duplex operation.

The Energy Efficient Ethernet (EEE) optional operational mode combines the IEEE 802.3 Media Access Control (MAC) sub-layer with 100Base-TX and 1000Base-T Physical Layers defined to support operation in Low Power Idle mode. When Low Power Idle mode is enabled, systems on both sides of the link can disable portions of the functionality and save power during periods of low link utilization.

- 1000Base-T PHY: Supports Energy Efficient Ethernet with the optional function of Low Power Idle
- 100Base-TX PHY: Supports Energy Efficient Ethernet with the optional function of Low Power Idle

The RTL8367RB-VB MAC uses Low Power Idle signaling to indicate to the PHY, and to the link partner, that a break in the data stream is expected, and components may use this information to enter power saving modes that require additional time to resume normal operation. Similarly, it informs the LPI Client that the link partner has sent such an indication.

9.22. Interrupt Pin for External CPU

The RTL8367RB-VB provides one Interrupt output pin to interrupt an external CPU. The polarity of the Interrupt output pin can be configured via register access. In configuration registers, each port has link-up and link-down interrupt flags with mask.

When port link-up or link-down interrupt mask is enabled, the RTL8367RB-VB will raise the interrupt signal to alarm the external CPU. The CPU can read the interrupt flag to determine which port has changed to which status.

10. Interface Descriptions

10.1. EEPROM SMI Host to EEPROM

The EEPROM interface of the RTL8367RB-VB uses the serial bus EEPROM Serial Management Interface (SMI) to read the EEPROM space up to 256K-bits. When the RTL8367RB-VB is powered up, it drives SCK and SDA to read the registers from the EEPROM.

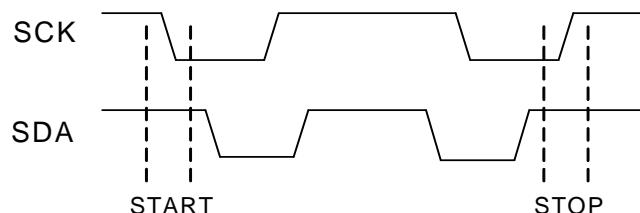

Figure 10. SMI Start and Stop Command

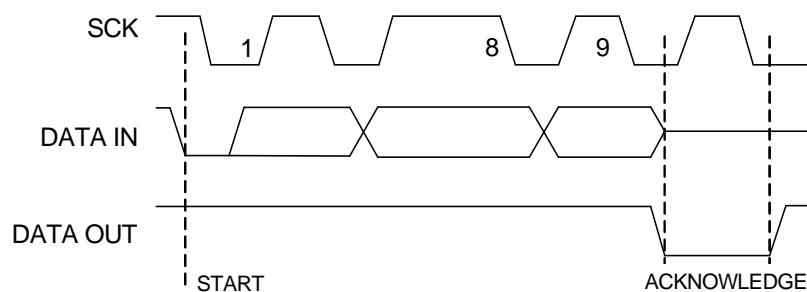

Figure 11. EEPROM SMI Host to EEPROM

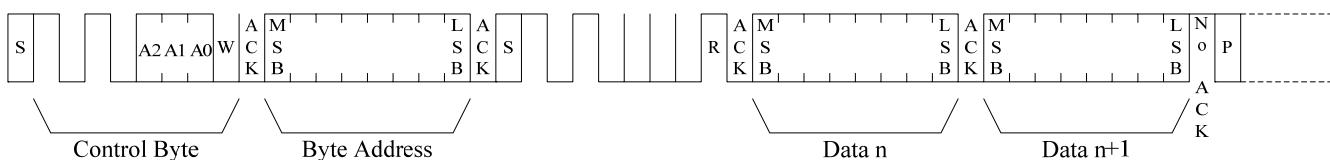

Figure 12. EEPROM SMI Host Mode Frame

10.2. EEPROM SMI Slave for External CPU

When EEPROM auto-load is complete, the RTL8367RB-VB registers can be accessed via SCK and SDA by an external CPU. The device address of the RTL8367RB-VB is 0x4. For the start and end of a write/read command, SCK needs one extra clock before/after the start/stop signals.

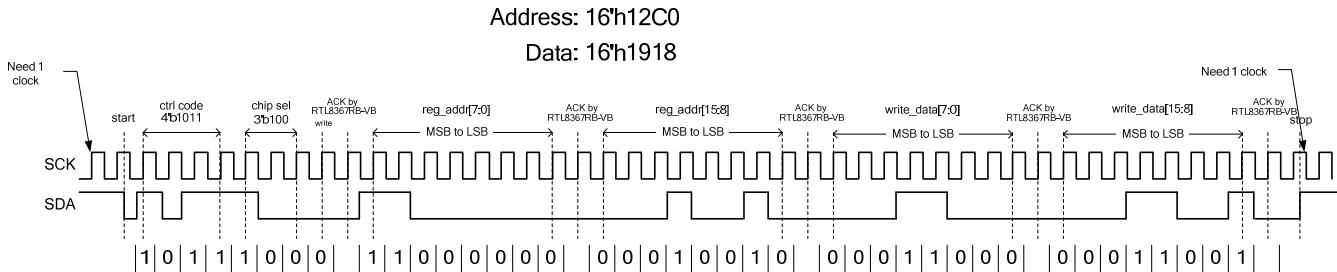

Figure 13. EEPROM SMI Write Command for Slave Mode

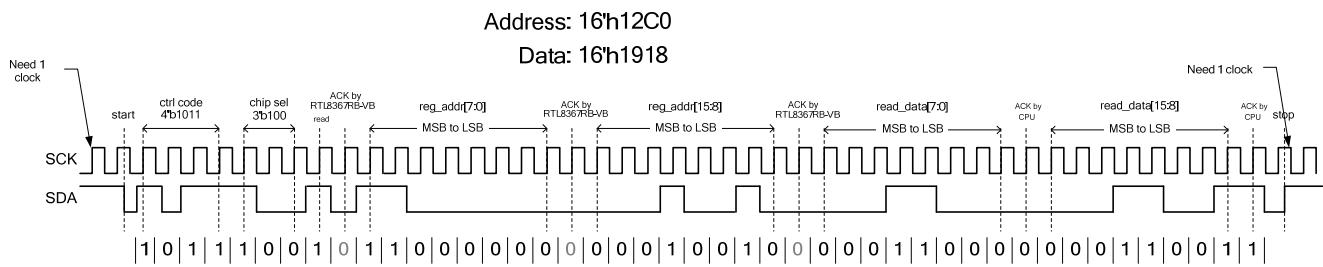

Figure 14. EEPROM SMI Read Command for Slave Mode

10.3. SPI Slave for External CPU

The RTL8367RB-VB supports an SPI-Slave Management Interface that can be enabled via Pin configuration (see Table 9, page 21). An External CPU can configure or manage the RTL8367RB-VB internal register through the SPI interface.

When the CPU writes data to the RTL8367RB-VB internal register via the SPI interface, the first 8-bits is OP code, and the write command OP code is 8h'02. The second 8-bits define the address [15:8], the third 8-bits are the Address [7:0], the fourth 8-bits are write data [15:8], and the fifth 8-bits are write data [7:0] (see Figure 15).

When the CPU reads data from the RTL8367RB-VB internal register via the SPI interface, the first 8-bits OP code is 8h'03. The second 8-bits define the address [15:8] and the third 8-bits are the Address [7:0]. The RTL8367RB-VB returns read data [15:8] at the fourth 8-bits, and data [7:0] at the fifth 8-bits (see Figure 16).

10.3.1. SPI-Slave Interface Access Format

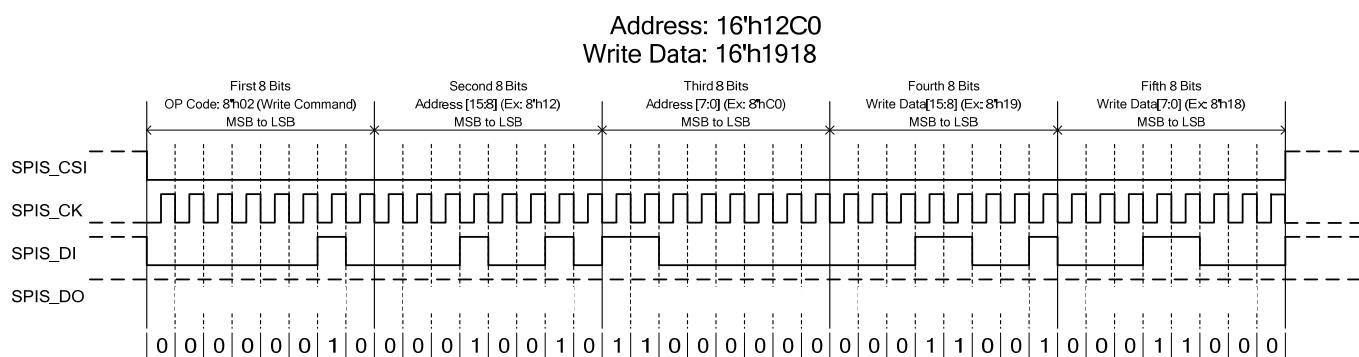

Figure 15. SPI-Slave Write Command Access Format

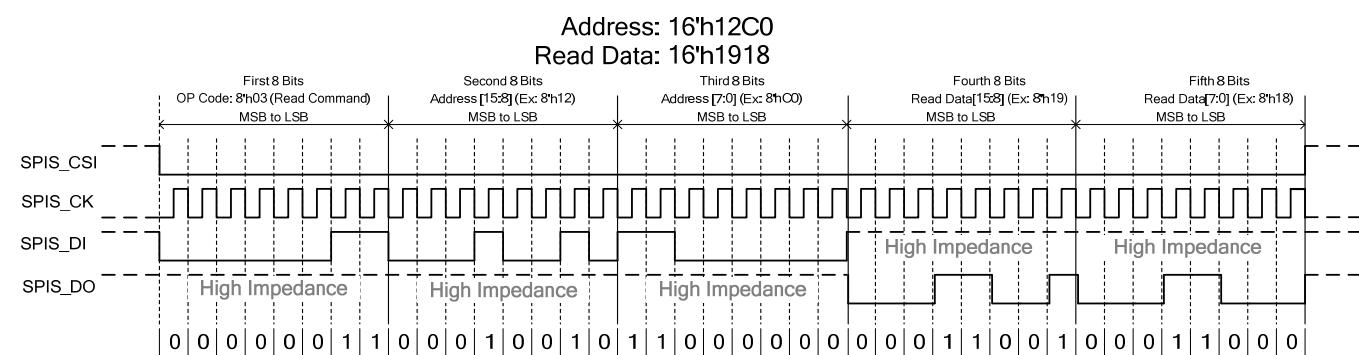

Figure 16. SPI-Slave Read Command Access Format

10.4. General Purpose Interface

The RTL8367RB-VB supports two extension interfaces. The interface function mux is summarized in Table 19 and Table 20. The Extension GMAC1 and Extension GMAC2 of the RTL8367RB-VB support RGMII, MII MAC mode, or MII PHY mode via register configuration.

Table 19. RTL8367RB-VB Extension Port 1 Pin Definitions

| Pin No. | Extension Interface | Type | RGMII | MII MAC Mode | MII PHY Mode |
|---------|---------------------|-----------------|-----------|--------------|--------------|
| 56 | E1_CRS | I _{PD} | - | M1M_CRS | - |
| 57 | E1_DO3 | O | RG1_TXD3 | M1M_TXD3 | M1P_RXD3 |
| 58 | E1_DO2 | O | RG1_TXD2 | M1M_TXD2 | M1P_RXD2 |
| 59 | E1_DO1 | O | RG1_TXD1 | M1M_TXD1 | M1P_RXD1 |
| 60 | E1_DO0 | O | RG1_TXD0 | M1M_TXD0 | M1P_RXD0 |

10.4.1. Extension Ports RGMII Mode (1Gbps)

The Extension GMAC1 and Extension GMAC2 of the RTL8367RB-VB support dual-port RGMII interfaces to an external CPU. The pin numbers and names are shown in Table 21 and Table 22. Figure 17 shows the signal diagram for Extension Port 1 and Extension Port 2 in RGMII interfaces.

Table 21. Extension GMAC1 RGMII Pins

| RTL8367RB-VB Pin No. | Type | Extension Port 1 RGMII |
|----------------------|------|------------------------|
| 57, 58, 59, 60 | O | RG1_TXD[3:0] |
| 61 | O | RG1_RXCTL |

10.4.2. Extension Ports MII MAC/PHY Mode Interface (10/100Mbps)

Both the Extension GMAC1, and Extension GMAC2 of the RTL8367RB-VB support MII MAC/PHY mode interfaces to an external CPU. The pin numbers and names are shown in Table 23, and Table 24.

Figure 18, page 52, shows the signal diagram for the MII PHY mode interface, and Figure 19, page 52, shows the signal diagram for the MAC mode interface.

11. Register Descriptions

In this section the following abbreviations are used:

RO: Read Only

LH: Latch High until clear

RW: Read/Write

SC: Self Clearing

LL: Latch Low until clear

11.1. PCS Register (PHY 0~4)

Table 25. PCS Register (PHY 0~4)

| Register | Register Description | Default |
|----------|--|---------|
| 0 | Control Register | 0x1140 |
| 1 | Status Register | 0x7949 |
| 2 | PHY Identifier 1 | 0x001C |
| 3 | PHY Identifier 2 | 0xC980 |
| 4 | Auto-Negotiation Advertisement Register | 0x0DE1 |
| 5 | Auto-Negotiation Link Partner Ability Register | 0x0000 |
| 6 | Auto-Negotiation Expansion Register | 0x0004 |
| 7 | Auto-Negotiation Page Transmit Register | 0x2001 |
| 8 | Auto-Negotiation Link Partner Next Page Register | 0x0000 |
| 9 | 1000Base-T Control Register | 0x0E00 |
| 10 | 1000Base-T Status Register | 0x0000 |
| 11~14 | Reserved | 0x0000 |
| 15 | Extended Status | 0x2000 |
| 16~31 | ASIC Control Register | - |

11.2. Register 0: Control

Table 26. Register 0: Control

| Reg.bit | Name | Mode | Description | Default |
|---------|--------------------------------|-------|---|---------|
| 0.15 | Reset | RW/SC | 1: PHY reset 0: Normal operation This bit is self-clearing. | 0 |
| 0.14 | Loopback (Digital Loopback) | RW | 1: Enable loopback. This will loopback TXD to RXD and ignore all activity on the cable media 0: Normal operation This function is usable only when this PHY is operated in 10Base-T full duplex, 100Base-TX full duplex, or 1000Base-T full duplex. | 0 |
| 0.13 | Speed Selection[0] | RW | [0.6, 0.13] Speed Selection[1:0] 11: Reserved 10: 1000Mbps 01: 100Mbps 00: 10Mbps This bit can be set through SMI (Read/Write). | 0 |
| 0.12 | Auto Negotiation Enable | RW | 1: Enable auto-negotiation process 0: Disable auto-negotiation process This bit can be set through SMI (Read/Write). | 1 |
| 0.11 | Power Down | RW | 1: Power down. All functions will be disabled except SMI function 0: Normal operation | 0 |
| 0.10 | Isolate | RW | 1: Electrically isolates the PHY from GMII. The PHY is still able to respond to SMI 0: Normal operation | 0 |
| 0.9 | Restart Auto Negotiation | RW/SC | 1: Restart Auto-Negotiation process 0: Normal operation | 0 |
| 0.8 | Duplex Mode | RW | 1: Full duplex operation 0: Half duplex operation This bit can be set through SMI (Read/Write). | 1 |
| 0.7 | Collision Test | RO | 1: Collision test enabled 0: Normal operation When set, this bit will cause the COL signal to be asserted in response to the assertion of TXEN within 512-bit times. The COL signal will be de-asserted within 4-bit times in response to the de-assertion of TXEN. | 0 |
| 0.6 | Speed Selection[1] | RW | See bit 13 | 1 |
| 0.[5:0] | Reserved | RO | Reserved | 000000 |

11.3. Register 1: Status

Table 27. Register 1: Status

| Reg.bit | Name | Mode | Description | Default |
|---------|--------------------------|-------|---|---------|
| 1.15 | 100Base-T4 | RO | 0: No 100Base-T4 capability The RTL8367RB-VB does not support 100Base-T4 mode and this bit should always be 0. | 0 |
| 1.14 | 100Base-TX-FD | RO | 1: 100Base-TX full duplex capable 0: Not 100Base-TX full duplex capable | 1 |
| 1.13 | 100Base-TX-HD | RO | 1: 100Base-TX half duplex capable 0: Not 100Base-TX half duplex capable | 1 |
| 1.12 | 10Base-T-FD | RO | 1: 10Base-T full duplex capable 0: Not 10Base-T full duplex capable | 1 |
| 1.11 | 10Base-T-HD | RO | 1: 10Base-T half duplex capable 0: Not 10Base-T half duplex capable | 1 |
| 1.10 | 100Base-T2-FD | RO | 0: Not 100Base-T2 full duplex capable The RTL8367RB-VB does not support 100Base-T2 mode and this bit should always be 0. | 0 |
| 1.9 | 100Base-T2-HD | RO | 0: Not 100Base-T2 half duplex capable The RTL8367RB-VB does not support 100Base-T2 mode and this bit should always be 0. | 0 |
| 1.8 | Extended Status | RO | 1: Extended status information in Register 15 The RTL8367RB-VB always supports Extended Status Register. | 1 |
| 1.7 | Reserved | RO | Reserved | 0 |
| 1.6 | MF Preamble Suppression | RO | The RTL8367RB-VB will accept management frames with preamble suppressed. | 1 |
| 1.5 | Auto-negotiate Complete | RO | 1: Auto-negotiation process completed 0: Auto-negotiation process not completed | 0 |
| 1.4 | Remote Fault | RO/LH | 1: Remote fault condition detected 0: No remote fault detected This bit will remain set until it is cleared by reading register 1 via the management interface. | 0 |
| 1.3 | Auto-Negotiation Ability | RO | 1: Auto-negotiation capable (permanently =1) | 1 |
| 1.2 | Link Status | RO/LL | 1: Link is established. If the link fails, this bit will be 0 until after reading this bit again 0: Link has failed since previous read If the link fails, this bit will be set to 0 until bit is read. | 0 |
| 1.1 | Jabber Detect | RO/LH | 1: Jabber detected 0: No Jabber detected Jabber is supported only in 10Base-T mode. | 0 |
| 1.0 | Extended Capability | RO | 1: Extended register capable (permanently =1) | 1 |

11.4. Register 2: PHY Identifier 1

The PHY Identifier Registers #1 and #2 together form a unique identifier for the PHY section of this device. The Identifier consists of a concatenation of the Organizationally Unique Identifier (OUI), the vendor's model number, and the model revision number. A PHY may return a value of zero in each of the 32 bits of the PHY Identifier if desired. The PHY Identifier is intended to support network management.

Table 28. Register 2: PHY Identifier 1

| Reg.bit | Name | Mode | Description | Default |
|----------|------|------|---|---------|
| 2.[15:0] | OUI | RO | Composed of the 3 rd to 18 th bits of the Organizationally Unique Identifier (OUI), respectively. | 0x001C |

11.5. Register 3: PHY Identifier 2

Table 29. Register 3: PHY Identifier 2

| Reg.bit | Name | Mode | Description | Default |
|-----------|-----------------|------|---|---------|
| 3.[15:10] | OUI | RO | Assigned to the 19 th through 24 th bits of the OUI | 110010 |
| 3.[9:4] | Model Number | RO | Manufacturer's model number | 011000 |
| 3.[3:0] | Revision Number | RO | Manufacturer's revision number | 0000 |

11.6. Register 4: Auto-Negotiation Advertisement

This register contains the advertisement abilities of this device as they will be transmitted to its Link Partner during Auto-negotiation.

Note: Each time the link ability of the RTL8367RB-VB is reconfigured, the auto-negotiation process should be executed to allow the configuration to take effect.

Table 30. Register 4: Auto-Negotiation Advertisement

| Reg.bit | Name | Mode | Description | Default |
|---------|---------------|------|--|---------|
| 4.15 | Next Page | RO | 1: Additional next pages exchange desired 0: No additional next pages exchange desired | 0 |
| 4.14 | Acknowledge | RO | Permanently=0 | 0 |
| 4.13 | Remote Fault | RW | 1: Advertises that the RTL8367RB-VB has detected a remote fault 0: No remote fault detected | 0 |
| 4.12 | Reserved | RO | Reserved | 0 |
| 4.11 | Reserved | RW | Reserved | 0 |
| 4.10 | Pause | RW | 1: Advertises that the RTL8367RB-VB has flow control capability 0: No flow control capability | 1 |
| 4.9 | 100Base-T4 | RO | 1: 100Base-T4 capable 0: Not 100Base-T4 capable (Permanently =0) | 0 |
| 4.8 | 100Base-TX-FD | RW | 1: 100Base-TX full duplex capable 0: Not 100Base-TX full duplex capable | 1 |
| 4.7 | 100Base-TX | RW | 1: 100Base-TX half duplex capable 0: Not 100Base-TX half duplex capable | 1 |

| Reg.bit | Name | Mode | Description | Default |
|---------|----------------|------|--|---------|
| 4.6 | 10Base-T-FD | RW | 1: 10Base-T full duplex capable 0: Not 10Base-T full duplex capable | 1 |
| 4.5 | 10Base-T | RW | 1: 10Base-T half duplex capable 0: Not 10Base-T half duplex capable | 1 |
| 4.[4:0] | Selector Field | RO | [00001]=IEEE 802.3 | 00001 |

Note 1: The setting of Register 4 has no effect unless auto-negotiation is restarted or the link goes down.

Note 2: If 1000Base-T is advertised, then the required next pages are automatically transmitted.

11.7. Register 5: Auto-Negotiation Link Partner Ability

This register contains the advertised abilities of the Link Partner as received during Auto-negotiation. The content changes after a successful Auto-negotiation.

Table 31. Register 5: Auto-Negotiation Link Partner Ability

| Reg.bit | Name | Mode | Description | Default |
|---------|------------------|------|---|---------|
| 5.15 | Next Page | RO | 1: Link partner desires Next Page transfer 0: Link partner does not desire Next Page transfer | 0 |
| 5.14 | Acknowledge | RO | 1: Link Partner acknowledges reception of Fast Link Pulse (FLP) words 0: Not acknowledged by Link Partner | 0 |
| 5.13 | Remote Fault | RO | 1: Remote Fault indicated by Link Partner 0: No remote fault indicated by Link Partner | 0 |
| 5.12 | Reserved | RO | Reserved | 0 |

12. Electrical Characteristics

12.1. Absolute Maximum Ratings

WARNING: Absolute maximum ratings are limits beyond which permanent damage may be caused to the device, or device reliability will be affected. All voltages are specified reference to GND unless otherwise specified.

Table 38. Absolute Maximum Ratings

| Parameter | Min | Max | Units |
|--|---------|-----------|-------|
| Junction Temperature (Tj) | - | +125 | °C |
| Storage Temperature | -45 | +125 | °C |
| DVDDIO, DVDDIO_1, DVDDIO_2, AVDDH, Supply Referenced to GND and AGND | GND-0.3 | +3.63 | V |
| DVDDL, AVDDL, PLLVDDL, Supply Referenced to GND, AGND, and PLLGND. | GND-0.3 | +1.21 | V |
| Digital Input Voltage | GND-0.3 | VDDIO+0.3 | V |

12.2. Recommended Operating Range

Table 39. Recommended Operating Range

| Parameter | Min | Typical | Max | Units |
|--|-------|---------|-------|-------|
| Ambient Operating Temperature (Ta) | 0 | - | 70 | °C |
| DVDDIO, AVDDH Supply Voltage Range | 3.135 | 3.3 | 3.465 | V |
| DVDDIO_2 Supply Voltage Range | 3.3V | 3.135 | 3.3 | V |
| | 2.5V | 2.375 | 2.5 | V |
| DVDDIO_1 Supply Voltage Range | 3.3V | 3.135 | 3.3 | V |
| | 2.5V | 2.375 | 2.5 | V |
| | 1.8V | 1.710 | 1.8 | V |
| DVDDL, AVDDL, PLLVDDL Supply Voltage Range | 1.045 | 1.1 | 1.155 | V |

12.3. Thermal Characteristics

12.3.1. Assembly Description

Table 40. Assembly Description

| | | |
|----------------|------------------------|--|
| Package | Type | E-Pad LQFP-128 |
| | Dimension (L×W) | 14×14mm |
| | Thickness | 1.4mm |
| PCB | PCB Dimension (L×W) | 100×80mm |
| | PCB Thickness | 1.6mm |
| | Number of Cu Layer-PCB | 4-Layer: - 1st layer (1oz): 20% coverage of Cu - 2nd layer (1oz): 80% coverage of Cu - 3rd layer (1oz): 80% coverage of Cu - 4th layer (1oz): 75% coverage of Cu |

12.3.2. Material Properties

Table 41. Material Properties

| Item | | Material | Thermal Conductivity K (W/m-k) |
|---------|---------------|----------|--------------------------------|
| Package | Die | Si | 147 |
| | Silver Paste | 1033BF | 2.5 |
| | Lead Frame | CDA7025 | 168 |
| | Mold Compound | 7372 | 0.9 |
| PCB | Cu | | 400 |
| | FR4 | | 0.2 |

12.3.3. Simulation Conditions

Table 42. Simulation Conditions

| | |
|--------------------------|------------------------|
| Input Power | 1.7W |
| Test Board (PCB) | 4L (2S2P) |
| Control Condition | Air Flow = 0, 1, 2 m/s |

12.3.4. Thermal Performance of E-Pad LQFP-128 on PCB Under Still Air Convection

Table 43. Thermal Performance of E-Pad LQFP-128 on PCB Under Still Air Convection

| | θ_{JA} | θ_{JB} | θ_{JC} | Ψ_{JB} |
|--------|---------------|---------------|---------------|-------------|
| 4L PCB | 16.5 | 7.7 | 9.9 | 8.0 |

Note:

θ_{JA} : Junction to ambient thermal resistance

θ_{JB} : Junction to board thermal resistance

θ_{JC} : Junction to case thermal resistance

Ψ_{JB} : Junction to bottom surface center of PCB thermal characterization

12.3.5. Thermal Performance of E-Pad LQFP-128 on PCB Under Forced Convection

Table 44. Thermal Performance of E-Pad LQFP-128 on PCB Under Forced Convection

| | Air Flow (m/s) | 0 | 1 | 2 |
|--------|----------------|------|------|------|
| 4L PCB | θ_{JA} | 16.5 | 14.9 | 14.2 |
| | Ψ_{JB} | 8.0 | 7.8 | 7.7 |

Note:

θ_{JA} : Junction to ambient thermal resistance

Ψ_{JB} : Junction to bottom surface center of PCB thermal characterization

12.4. DC Characteristics

Table 45. DC Characteristics

| Parameter | SYM | Min | Typical | Max | Units |
|--|--|------|---------|-----|-------|
| Power Supply Current for RGMII1 DVDDIO_1 (2.5V) (For General Purpose Interface) | I _{DVDDIO_1} | - | 30 | - | mA |
| Power Supply Current for RGMII2 DVDDIO_2 (2.5V) (For General Purpose Interface) | I _{DVDDIO_2} | - | 31 | - | mA |
| System Idle (All UTP Port Link Down, without Extension Ports and LEDs) | | | | | |
| Power Supply Current for VDDH | I _{DVDDIO} , I _{AVDDH} | - | 110 | - | mA |
| Power Supply Current for VDDL | I _{DVDDL} , I _{AVDDL} , I _{PLLVDDL} | - | 43 | - | mA |
| 1000M Active (All UTP Ports Link/Active, without Extension Ports and LEDs) | | | | | |
| Power Supply Current for VDDH | I _{DVDDIO} , I _{AVDDH} | - | 221 | - | mA |
| Power Supply Current for VDDL | I _{DVDDL} , I _{AVDDL} , I _{PLLVDDL} | - | 710 | - | mA |
| VDDIO=3.3V | | | | | |
| TTL Input High Voltage | V _{ih} | 2.0 | - | - | V |
| TTL Input Low Voltage | V _{il} | - | - | 0.7 | V |
| Output High Voltage | V _{oh} | 2.7 | - | - | V |
| Output Low Voltage | V _{ol} | - | - | 0.6 | V |
| VDDIO=2.5V | | | | | |
| TTL Input High Voltage | V _{ih} | 1.7 | - | - | V |
| TTL Input Low Voltage | V _{il} | - | - | 0.6 | V |
| Output High Voltage | V _{oh} | 2.25 | - | - | V |
| Output Low Voltage | V _{ol} | - | - | 0.4 | V |
| VDDIO=1.8V | | | | | |
| TTL Input High Voltage | V _{ih} | 1.2 | - | - | V |
| TTL Input Low Voltage | V _{il} | - | - | 0.6 | V |
| Output High Voltage | V _{oh} | 1.45 | - | - | V |
| Output Low Voltage | V _{ol} | - | - | 0.4 | V |

Note1: Both I_{DVDDIO_1} & I_{DVDDIO_2} should be added to the total current consumption when the dual extension ports of the RTL8367RB-VB are used.

Note2: All test conditions are tested under 25 degrees Celsius.

12.5. AC Characteristics

12.5.1. EEPROM SMI Host Mode Timing Characteristics

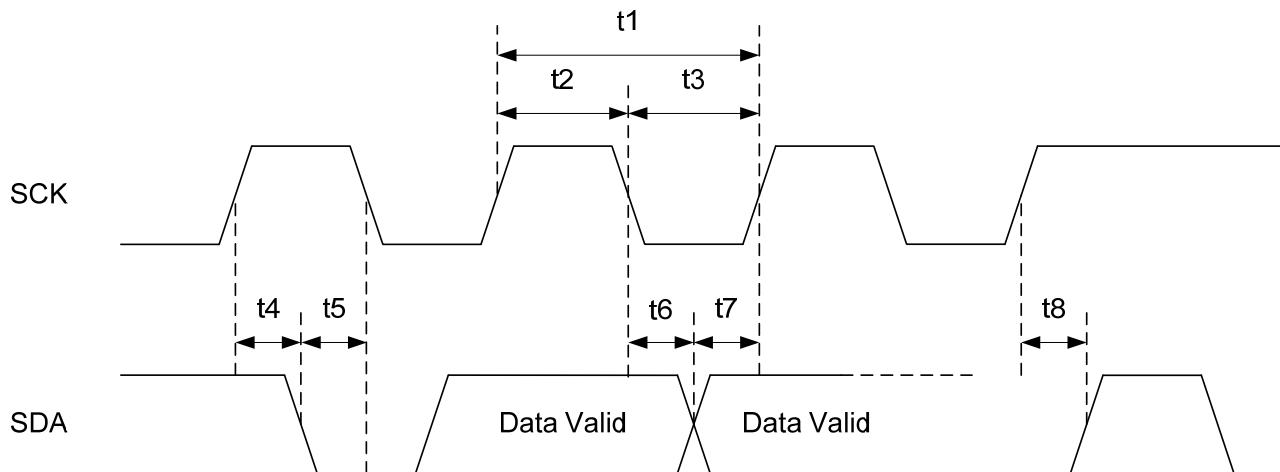

Figure 20. EEPROM SMI Host Mode Timing Characteristics

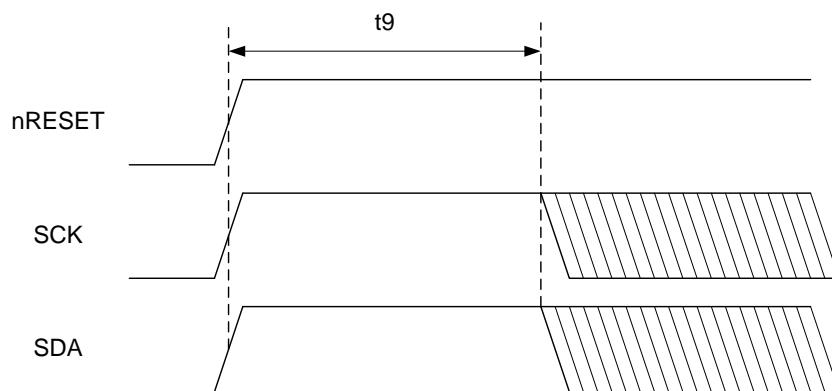

Figure 21. SCK/SDA Power on Timing

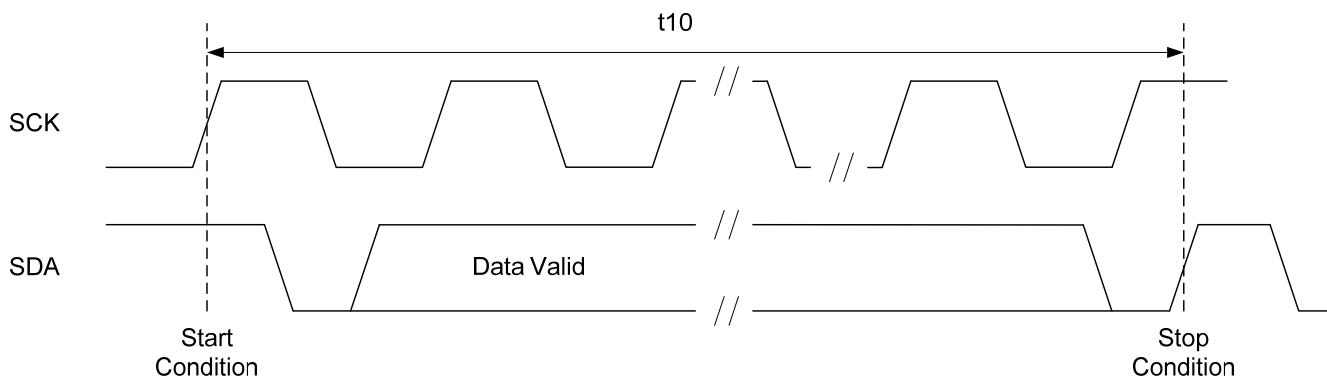

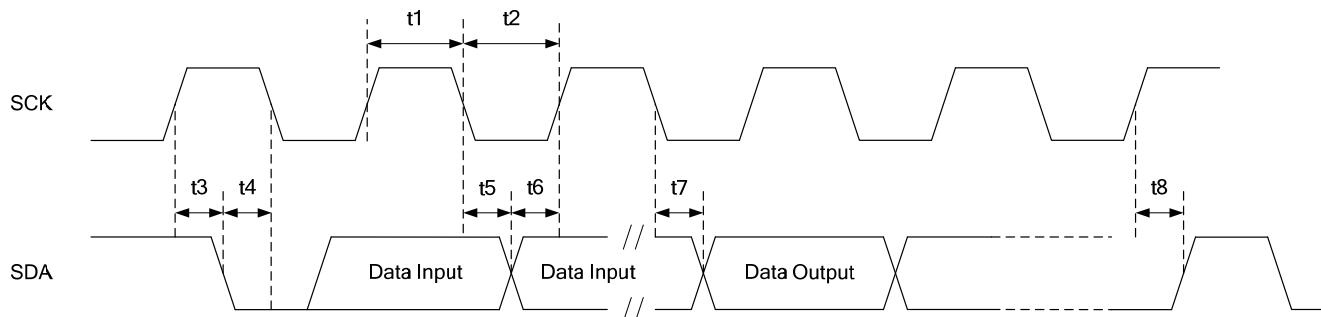

Figure 22. EEPROM Auto-Load Timing

Table 46. EEPROM SMI Host Mode Timing Characteristics

| Symbol | Description | Type | Min | Typical | Max | Units |

| t7 | Clock to Data Output Delay | O | - | 40 | - | ns |
| t8 | STOP Condition Setup Time | I | 4.0 | - | - | μs |

12.5.3. SPI Slave Mode Timing Characteristics

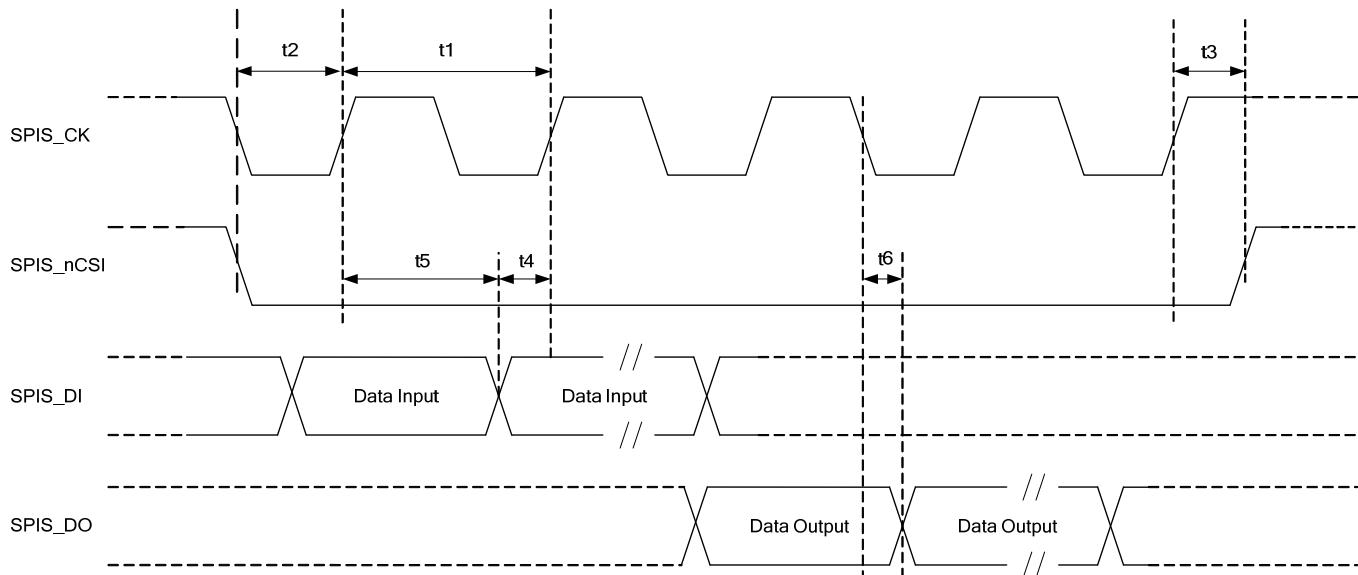

Figure 24. SPI-Slave Mode Timing Characteristics

Table 48. SPI-Slave Mode Timing Characteristics

| Symbol | Description | Type | Min | Typical | Max | Units |
|--------|---|------|-----|---------|-----|-------|
| t1 | SPIS_CK Clock Period | I | 200 | - | - | ns |
| t2 | SPIS_nCSI active setup time relative to SPIS_CK | I | 30 | - | - | ns |
| t3 | SPIS_nCSI active hold time relative to SPIS_CK | I | 30 | - | - | ns |
| t4 | SPIS_DI to SPIS_CK Setup Time | I | 30 | - | - | ns |
| t5 | SPIS_DI to SPIS_CK Hold Time | I | 30 | - | - | ns |
| t6 | SPIS_CK Falling Edge to SPIS_DO Output Delay Time | O | 10 | 24 | - | ns |

12.5.4. MDIO Slave Mode Timing Characteristics

The RTL8367RB-VB supports MDIO (MMD) slave mode. The Master (CPU) can access the Slave (RTL8367RB-VB) registers via the MDIO interface. The MDIO is a bi-directional signal that can be sourced by the Master or the Slave. In a write command, the master sources the MDIO signal. In a read command, the slave sources the MDIO signal.

- The timing characteristics t1, t2, and t3 (Table 49) of the Master (the RTL8367RB-VB link partner CPU) are provided by the Master when the Master sources the MDIO signal (Write command)
- The timing characteristics t4 (Table 49) of the Slave (RTL8367RB-VB) are provided by the RTL8367RB-VB when the RTL8367RB-VB sources the MDIO signal (Read command)

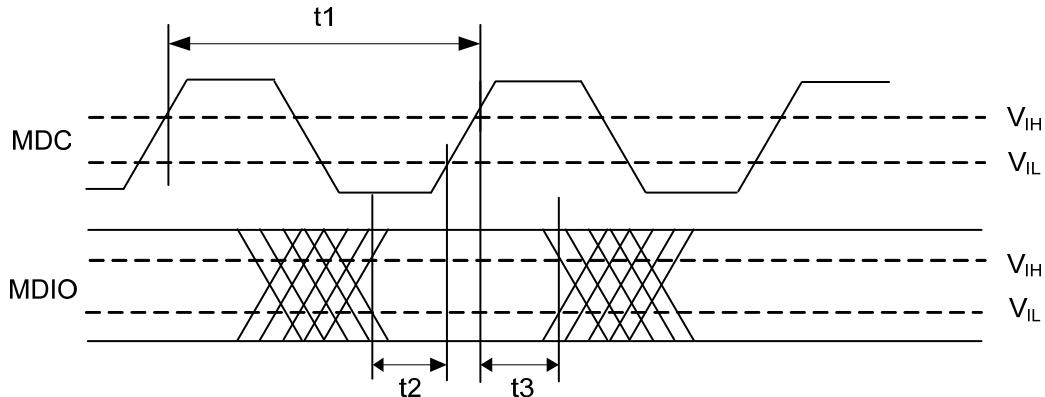

Figure 25. MDIO Sourced by Master

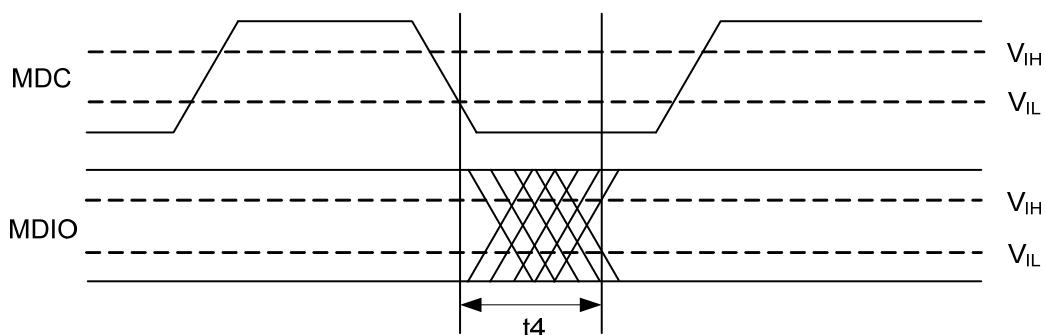

Figure 26. MDIO Sourced by RTL8367RB-VB (Slave)

Table 49. MDIO Timing Characteristics and Requirement

| Parameter | SYM | Description/Condition | Type | Min | Typical | Max | Units |
|--|-------|---|------|-----|---------|-----|-------|
| MDC Clock Period | t_1 | Clock Period | I | 125 | - | - | ns |
| MDIO to MDC Rising Setup Time (Write Data) | t_2 | Input Setup Time | I | 25 | - | - | ns |
| MDIO to MDC Rising Hold Time (Write Data) | t_3 | Input Hold Time | I | 25 | - | - | ns |
| MDC to MDIO Delay Time (Read Data) | t_4 | Clock (Falling Edge) to Data Delay Time | O | 0 | 2.8 | 40 | ns |

12.5.5. MII MAC Mode Timing

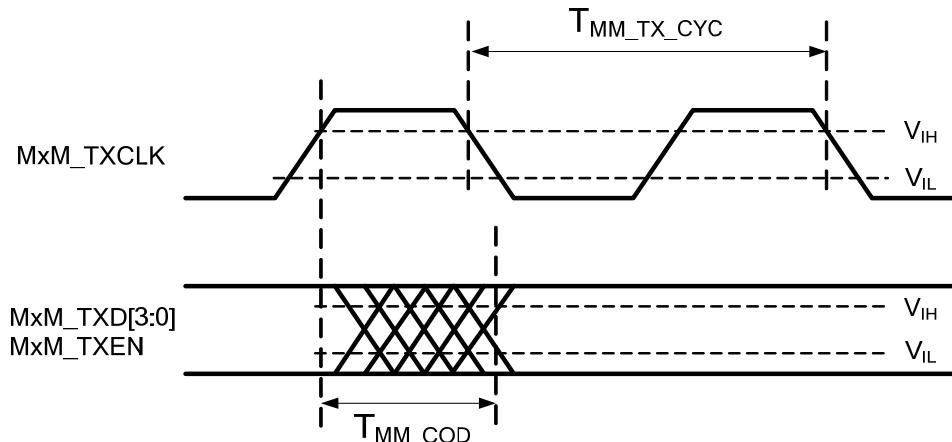

Figure 27. MII MAC Mode Clock to Data Output Delay Timing

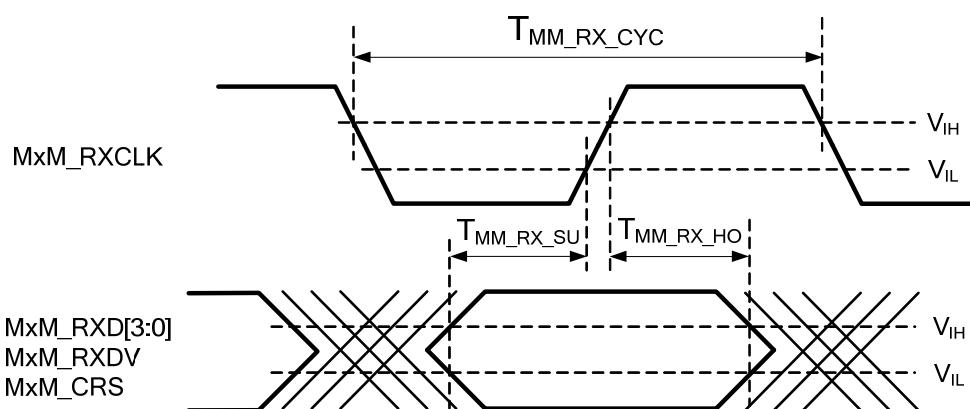

Figure 28. MII MAC Mode Input Timing

Table 50. MII MAC Mode Timing

| Parameter | SYM | Description/Condition | Type | Min | Typical | Max | Units |
|--|------------------------|-----------------------|------|-----|---------|-----|-------|
| 100Base-TX MxM_RXCLK and MxM_RXCLK Input Cycle Time | T _{MM_RX_CYC} | 25MHz Clock Input. | I | - | 40 | - | ns |
| 10Base-T MxM_RXCLK and MxM_RXCLK Input Cycle Time | T _{MM_RX_CYC} | 2.5MHz Clock Input. | I | - | 400 | - | ns |
| MxM_RXCLK to MxM_RXD[3:0] and MxM_RXEN Output Delay Time | T _{MM_COD} | - | O | 3 | 5 | 7 | ns |
| MxM_RXD[3:0], MxM_RXDV, and MxM_CRS Input Setup Time | T _{MM_RX_SU} | - | I | 10 | - | - | ns |
| MxM_RXD[3:0], MxM_RXDV, and MxM_CRS Input Hold Time | T _{MM_RX_HO} | - | I | 10 | - | - | ns |

12.5.6. MII PHY Mode Timing

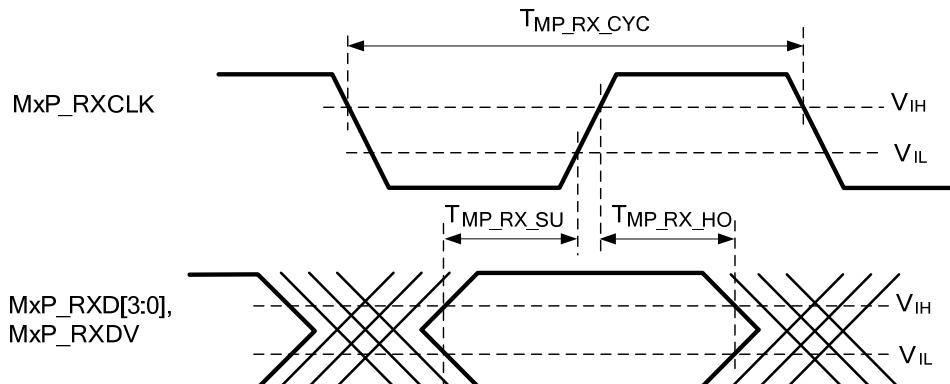

Figure 29. MII PHY Mode Output Timing

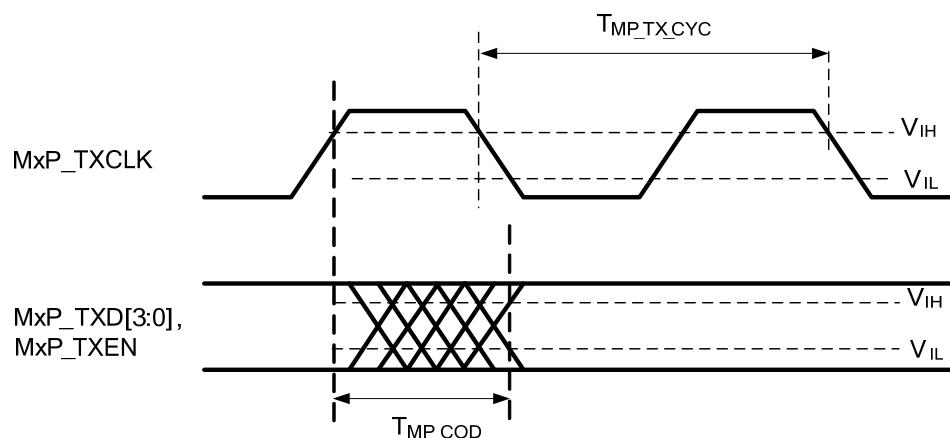

Figure 30. MII PHY Mode Clock Output to Data Input Delay Timing

Table 51. MII PHY Mode Timing Characteristics

| Parameter | SYM | Description/Condition | Type | Min | Typical | Max | Units |
|---|--|-----------------------|------|-----|---------|-----|-------|
| 100M MxP_RXCLK and MxP_TXCLK Output Cycle Time | T _{MP_RX_CYC} T _{MP_TX_CYC} | 25MHz Clock Output. | O | - | 40 | - | ns |
| 10M MxP_RXCLK and MxP_TXCLK Output Cycle Time | T _{MP_RX_CYC} T _{MP_TX_CYC} | 2.5MHz Clock Output. | O | - | 400 | - | ns |
| 100M MxP_RXD[3:0] and MxP_RXDV to MxP_RXCLK Output Setup Time | T _{MP_RX_SU} | - | O | 14 | 18 | - | ns |
| 100M MxP_RXD[3:0] and MxP_RXDV to MxP_RXCLK Output Hold Time | T _{MP_RX_HO} | - | O | 16 | 19.5 | - | ns |
| 100M MxP_TXCLK Clock Output to MxP_TXD[3:0] and MxP_TXEN Input Delay Time | T _{MP_COD} | - | I | 0 | - | 25 | ns |
